CODE OF CONDUCT

Segment 1 of 3

Version	2.4	**Effective Date**	01 April 2024
Review Date	31 March 2025	**Classification**	Internal Use Only
Approved By	Mr. Rajesh Arjun	**Document Owner**	Ms. Priya Menon
Legal Review	Mr. Sandeep Iyer	**Department**	Human Resources & Legal
Doc Ref.	HR-COC-001-v2.4	**Segment**	1 of 3 (Pages 1 – 40)
Applies To	All Employees, Contractors, Board Members	**Total Segments**	3 (Pages 1–40, 41–80, 81–120)

This Code of Conduct is the definitive statement of the ethical standards, professional obligations, and behavioural expectations governing every individual associated with Arjun Technologies Pvt. Ltd.. It applies without exception to all permanent and fixed-term employees, contractors, board members, interns, and anyone acting on the company's behalf. Compliance is a condition of employment and engagement. Direct questions to hr@arjuntech.in or to the General Counsel at Mr. Sandeep Iyer.

Revision History

The table below records the complete version history of the Arjun Technologies Pvt. Ltd. Code of Conduct since its first publication in April 2010. Every revision has been approved by the Chief Executive Officer and reviewed by the General Counsel and the Vice President of Human Resources before taking effect. Employees must ensure they are reading the current version at all times. The current version is published on the HRMS portal under Policies and Documents and is distributed to all employees by email notification whenever a material change is made. Where revisions are minor and editorial, employees are notified through the quarterly HR newsletter rather than by individual email. The version number and effective date on the cover page of each segment are the definitive indicators of currency.

Table of Contents

This Code of Conduct is published in three segments of approximately 40 pages each. Segment 1 (this document) covers the foundational sections: the CEO's message, purpose and scope, values and ethical framework, integrity and honesty, conflicts of interest, and gifts and anti-corruption. Segment 2 covers confidentiality, workplace conduct, anti-harassment, digital conduct and AI ethics, and political activity. Segment 3 covers ESG responsibilities, whistleblowing, consequences of violations, and all appendices including the ethical decision-making framework, scenario guidance, disclosure forms, and the acknowledgement form. All three segments are available on the HRMS portal under Policies and Documents.

1. Message from the Chief Executive Officer

To every member of the Arjun Technologies community — employees, contractors, board members, and partners — this Code of Conduct is one of the most important documents I ask you to engage with genuinely. Not because it is a legal and regulatory compliance requirement, although it is. Not because auditors and clients expect it to exist as evidence of a well-governed organisation, although they do. But because the values and standards it describes are the actual foundation on which this organisation operates — the foundation on which its reputation has been built over sixteen years, and on which every individual's career within it ultimately depends.

Arjun Technologies has grown from twelve people in a single office to more than 4,200+ professionals across five cities. That growth has been built on one thing above all others: trust. The trust of clients who share sensitive systems, proprietary data, and strategic information with us because they believe we will protect it as carefully as they would protect it themselves. The trust of talented professionals who choose to build their careers here because they believe this is a place where good work is recognised and where integrity is genuinely valued rather than merely performed. The trust of partners, suppliers, and the communities in which we operate because they believe we will deal with them honestly and fairly. Every piece of that trust has been earned through consistent, ethical conduct by the thousands of individuals who represent this organisation every day in every interaction. It can be destroyed by a single significant lapse — and once destroyed, it cannot be rebuilt through a policy change or a public apology.

I want to be honest with you about what this Code asks of you. It does not ask you to be perfect, because professional life presents genuinely difficult ethical situations where reasonable people applying sound judgement can reach different conclusions. What it does ask is that you always try to do the right thing; that you ask for guidance when you are genuinely uncertain about the right course rather than making a private judgement under commercial or time pressure; that you speak up when something appears wrong, even when speaking up feels uncomfortable or inconvenient; and that you never allow short-term commercial results, personal advantage, or the instruction of a more senior colleague to override the ethical standards that define who we are as an organisation. An employee who raises a concern in good faith — about a colleague's conduct, about a commercial practice, about a potential compliance issue, about anything they genuinely believe may be wrong — will always have my personal and institutional support, regardless of how senior the subject of the concern is, how commercially significant the relationship involved, or how inconvenient the timing.

I want to be equally clear about what happens when this Code is violated. The consequences are proportionate to the nature and severity of the breach, but they are real and they apply consistently across all levels of seniority. Senior position confers no immunity from disciplinary consequences — if anything, senior individuals are held to a higher standard precisely because their behaviour sets the visible ethical tone for everyone around them. A leader who cuts ethical

corners teaches every junior employee who observes it that corners may be cut. The reverse is also true: a leader who consistently models the highest ethical standards teaches every person around them that those standards are real and expected. The culture of this organisation is built one decision at a time by the thousands of individuals who make up this community.

This Code was last fully reviewed in April 2024 and reflects the most current legal, regulatory, and operational context including the Digital Personal Data Protection Act 2023 and the rapidly evolving landscape of artificial intelligence in professional settings. I encourage every one of you to read it carefully and in full, to discuss any questions with your HR Business Partner or with the Legal team, and to keep it accessible as a reference when you face situations where the right course of action is not immediately obvious. The culture of ethical integrity that this Code aims to build is not something that leadership creates through policy documents alone. It is something that every individual in this organisation creates through daily choices, large and small, about how to act when it matters. Thank you for the commitment and professionalism you bring to this organisation. — Mr. Rajesh Arjun, Chief Executive Officer, Arjun Technologies Pvt. Ltd.

2. Purpose, Scope, and Application

2.1 Purpose of This Code

The Code of Conduct of Arjun Technologies Pvt. Ltd. is the authoritative statement of the ethical standards and professional obligations that apply to every individual associated with the organisation. Its purpose is threefold. First, it provides every covered individual with clear, specific, and actionable guidance about the conduct the organisation expects — not in the form of abstract values that are pleasant to assert but difficult to operationalise in practice, but in the form of practical standards described with sufficient specificity to guide real decisions in real situations. Second, it creates a shared framework of expectations that allows the organisation to manage conduct consistently and fairly, ensuring that similar situations are treated similarly regardless of the business unit, office location, or seniority of the individual involved. Third, it demonstrates to clients, partners, regulators, employees, and the public that the organisation has made a genuine, documented, and enforced commitment to ethical conduct — not merely a commitment to having a code of conduct on file.

This Code does not attempt to address every ethical situation that might arise across an organisation of 4,200+ people operating in five cities across multiple industry sectors and client relationships. The variety of circumstances is simply too great for any single document to anticipate completely. What this Code does is establish the principles, values, and analytical framework that should guide judgement when specific provisions do not address the exact situation at hand. An individual who has genuinely internalised the values and standards in this Code should be able to navigate most ethical situations correctly — including novel and complex ones — by applying the right analytical questions and sound moral reasoning, rather than searching for the specific rule that covers the exact scenario they face.

This Code operates alongside, and does not replace, the more detailed policies that govern specific aspects of conduct in greater depth: the IT Security Policy, the Data Privacy Policy, the Prevention of Sexual Harassment Policy, the Anti-Bribery and Corruption Policy, the Insider Trading Policy, the Whistleblower Policy, and the Employee Handbook. Where this Code and a specific policy address the same topic, the specific policy provides the more detailed operational provisions and the Code provides the overarching ethical framework within which those provisions should be understood and applied. Employees are expected to be familiar with all policies relevant to their role and function, and familiarity with this Code does not substitute for familiarity with those specific policies.

2.2 Scope — Who This Code Applies To

This Code applies to every individual who acts on behalf of Arjun Technologies Pvt. Ltd. in any capacity whatsoever, without exception or distinction. The covered individuals are: all permanent full-time and part-time employees at every level of seniority, from entry-level associate through

to and including the Chief Executive Officer; all fixed-term contract employees for the full duration of their contract; all contractors, freelancers, consultants, and independent workers who perform work for the company or on client projects on the company's behalf, regardless of the nature of the commercial arrangement under which they are engaged; all members of the Board of Directors and any advisory board in their capacity as representatives of the company; all interns and graduate trainees during their placement period; all seconded employees during their secondment; and all representatives of joint venture entities or affiliated companies acting in a capacity that involves the company's business, clients, or professional reputation.

The Code applies equally to all covered individuals regardless of seniority, tenure, or commercial importance to the organisation. This equality of application is not merely a formal statement — it is a commitment enforced in practice and reflected in the company's disciplinary history. The most serious Code violations at this organisation over its history have involved individuals at various levels of seniority, and in every case, the fact of seniority has not been a mitigating factor in the consequences applied. Senior employees carry a heightened obligation, not a reduced one, precisely because their conduct sets the visible behavioural standard for everyone around them and below them in the organisational hierarchy.

Third parties who provide services to the company — including vendors, suppliers, managed service providers, and subcontractors — are not directly covered by this Code, but the company's contracts with these parties contain provisions requiring conduct consistent with the standards in this Code in all matters related to the company's business. Third parties who act in a manner inconsistent with these standards risk termination of their commercial relationship with the company. Employees who become aware of third-party conduct that would constitute a violation of this Code if it were carried out by an employee should report it through their manager and the Legal team.

2.3 Scope — When and Where the Code Applies

The Code applies to all professional conduct connected to the individual's role at Arjun Technologies, regardless of the physical location, the time of day, or the communication medium. It applies in the company's offices and meeting rooms; at client sites and partner offices; during business travel domestically and internationally; at industry conferences, professional events, and seminars; in all digital communications using company systems or personal devices for company business — including email, instant messaging, video calls, collaboration platforms, code review comments, and project management tools; and in professional social media activity that relates to the individual's role, the company, its clients, or the technology industry in which the company operates.

The Code does not govern purely personal conduct that has no connection to the individual's professional role or to the company. Employees have full personal lives, personal views,

personal relationships, and personal social media presences, and the Code does not intrude into genuinely personal domains. However, the boundary between personal and professional conduct is not always sharp, particularly in the age of social media and digital communication. Employees — particularly those at senior levels whose professional identity is publicly associated with the company — should be aware that conduct in personal contexts that becomes publicly known may reflect on the organisation even when that was not the individual's intention.

The Code applies at all times during employment, including during approved leave periods, sabbaticals, and periods of notice. The confidentiality obligations and the non-solicitation provisions in particular continue to apply for the periods specified in the employment contract after the termination of employment. Conduct that occurs outside of normal working hours but that is connected to the individual's professional role — a business dinner, an industry event, a client entertainment evening — is fully within the scope of the Code for the duration of that activity.

2.4 Personal Responsibility to Understand and Apply

Every individual covered by this Code has a personal and non-delegable responsibility to read it carefully and in full, to understand its provisions and the reasoning behind them, to ask for clarification from HR or Legal when a provision is unclear or its application to a specific situation is uncertain, to apply it thoughtfully to their daily professional conduct, and to raise concerns when they observe conduct that appears inconsistent with its standards. This responsibility cannot be discharged by a hurried reading of the document at onboarding followed by a checkbox in an HR system. It requires genuine engagement with the substance of the standards described and a sustained willingness to apply them consciously in the situations that arise in the course of professional life.

Managers and leaders carry an additional layer of responsibility beyond personal compliance. They are accountable for creating team and organisational environments in which the Code's standards are visibly and consistently upheld, in which team members feel genuinely safe to raise concerns or ask questions without fear of retaliation or marginalisation, in which their own conduct consistently and publicly models the standards they are expected to enforce, and in which the language and culture of the team reflect the Inclusion and Collaboration values that this Code describes. The company's leadership assessment and performance evaluation processes explicitly include an assessment of the ethical environment that each manager creates, not merely the commercial and operational results they achieve.

Ignorance of the Code or of any of the specific policies referenced within it is not a defence to a finding of violation. The Code is provided to every covered individual at the start of their engagement, is available permanently on the HRMS portal, is updated with notice to all

employees when material changes are made, and is the subject of annual mandatory refresher training. Every covered individual has the means and the obligation to know and understand its provisions. If any provision is genuinely unclear, the correct response is to ask HR or Legal for clarification before acting — not to proceed on the basis of an assumption about what the provision probably means.

3. Our Values and the Ethical Foundation

3.1 The Six Core Values as Conduct Standards

The six Core Values of Arjun Technologies — Integrity, Excellence, Collaboration, Accountability, Innovation, and Inclusion — are the ethical foundation from which every specific conduct standard in this Code is derived. They are not decorative statements created for marketing purposes or displayed on office walls for the benefit of visitors. They are the operating principles that should govern every significant decision and professional interaction within this organisation — from a code review to a client negotiation, from a hiring decision to a performance assessment, from a vendor selection to an expense claim. An individual who consistently acts in a manner genuinely consistent with these six values will, in the great majority of situations, also be acting consistently with every specific standard described in this Code.

Integrity, the first and most foundational value, requires specific and observable behaviours: communicating honestly in all professional dealings; accurately representing qualifications, capabilities, and the status of work; not omitting material facts that others have a right to know; acknowledging errors and mistakes promptly and without minimisation; disclosing conflicts of interest as soon as they arise; and refusing to misrepresent facts to clients, colleagues, regulators, or any other stakeholder regardless of the commercial pressure to do so. Integrity is not a characteristic that a person has or does not have as a fixed personal trait — it is a standard of conduct that is demonstrated through specific choices in specific situations, and it can be practised more or less consistently by anyone depending on the habits, awareness, and organisational culture that support or undermine it.

Excellence as a conduct standard means delivering work that meets the purpose for which it was designed, communicating proactively when a commitment cannot be met rather than allowing a deadline to pass in silence, maintaining professional competence at the level required for the work undertaken, and not accepting substandard work from oneself or one's team simply because addressing it is uncomfortable. Collaboration means sharing knowledge and credit generously, seeking input from people who think differently before drawing conclusions, and treating colleagues' time and effort with the same respect as one's own. Accountability means owning one's commitments fully, communicating early when circumstances prevent meeting them, and not deflecting responsibility onto processes, tools, or other people when the failure is personal. Innovation means creating conditions where questioning established approaches is valued. Inclusion means treating every person with equal dignity and taking conscious, ongoing action to ensure that opportunities are genuinely equally accessible.

3.2 The Four-Question Ethical Decision Framework

The most effective tool for navigating ethical uncertainty in professional life is not a longer and more comprehensive rulebook — it is a reliable analytical framework that can be applied

consistently across the novel situations that no specific rule anticipates. The company commends the following four-question framework as the standard approach for evaluating whether a proposed course of action is consistent with the values and standards in this Code. The questions are designed to be applied in sequence; a clear 'no' or 'uncertain' answer at any stage is a strong signal that the proposed action requires re-evaluation or consultation with HR or Legal before proceeding. The framework does not guarantee that following it will always produce the single objectively correct answer — ethical questions are sometimes genuinely difficult. What it does guarantee is that the important questions are asked deliberately before the decision is made.

#	Question	What It Tests	A 'No' or 'Uncertain' Answer Means
1	Is it LEGAL? Would this action comply with all applicable laws and regulations in all relevant jurisdictions, including Indian law and any internat	The minimum legal compliance threshold	Stop immediately. Do not proceed. Seek Legal team guidance
2	Is it CONSISTENT WITH THE CODE? Would a reasonable, senior colleague at this company consider this action compliant with this Code of Conduct and with all releva	The organisational ethical standards we have explicitly committed to	Do not proceed without explicit approval from HR or Le
3	Is it TRANSPARENT? Would I be fully comfortable if the Chief Executive Officer, the Board, a client, a regulator, or a journalist could see exactly what I a	The transparency test — examines both the act and the intention	Assume the action will be viewed unfavourably if it appears to
4	Is it RIGHT? Does this action reflect the kind of professional I want to be and the kind of organisation I believe this should be? Would I be prou	Personal integrity and values alignment — goes beyond formal compliance to the ethical ca	Acknowledge the concern and take it seriously even if the action

When an employee has applied all four questions and remains genuinely uncertain about the right course of action, the correct response is always to escalate and seek guidance — not to proceed under time pressure on the basis of a private judgement that may be wrong. The channels for seeking guidance are: the line manager (unless the concern involves the line manager); the HR Business Partner; the Legal team for legally complex questions; and the Whistleblower hotline for anonymous reporting where the employee does not feel safe raising the concern through normal channels. The cost of asking a question before acting is zero. The cost of acting incorrectly without asking can be severe for both the individual and the organisation.

3.3 The Standard of the Reasonable Professional

Throughout this Code, the standard against which conduct is evaluated is that of the 'reasonable professional' — a person of ordinary good character and professional competence who knows the company's values and policies, wants to do the right thing, and is making a genuine effort to apply sound judgement in a specific situation. This standard is intentionally neither the standard of a moral philosopher with unlimited time to deliberate nor the standard of someone with no ethical awareness at all. It is the standard of a normally competent, normally ethical professional exercising the care and judgement that their role requires.

The reasonable professional standard is relevant in several ways. It is the standard against which disputed conduct is assessed in disciplinary investigations — not the standard of

hindsight perfection or the standard of what the most ethically cautious person on earth would have done, but the standard of what a reasonable professional in the same situation, with the same information available, would have done. It is also the standard against which an employee's confidence in a course of action should be calibrated — before acting, the relevant question is not 'can I construct a justification for this?' but 'would a reasonable professional in my position, knowing what I know, consider this clearly appropriate?'

Applying the reasonable professional standard also means that wilful ignorance is not a defence. A reasonable professional takes reasonable steps to understand the rules and standards that apply to their work. They do not deliberately avoid learning about an obligation in order to be able to claim later that they did not know about it. They ask when they are uncertain. They read policies that are relevant to their role. They take mandatory training seriously rather than rushing through it to tick a compliance box. The company expects this standard from every covered individual and will apply it consistently in every conduct assessment.

4. Integrity and Honesty in All Professional Dealings

4.1 Honest Communication in All Contexts

Honesty is the most fundamental professional obligation at Arjun Technologies and the prerequisite on which every other standard in this Code depends. An individual who is willing to be dishonest about one category of thing cannot be relied upon to be honest about other things, and an organisation that tolerates dishonesty in small matters gradually erodes the foundation of trust on which client relationships, team functioning, the company's external reputation, and every individual's professional reputation ultimately rest. Honesty is not merely an ethical aspiration at this company — it is the operating standard from which the business model derives its commercial viability.

Honest communication means, in concrete and specific terms: stating facts accurately and completely in all professional interactions; not omitting material information that the party on the receiving end of the communication has a reasonable right to know in order to make an informed decision or take appropriate action; not creating false impressions through statements that are technically true but are selected or framed to mislead; not misrepresenting one's own qualifications, the qualifications of the team, the company's technical capabilities, or the current status of a project or deliverable; not presenting speculation, assumption, or uncertainty as established fact; and not attributing views or conclusions to sources that do not actually support them.

The obligation of honest communication applies without distinction across every professional context: conversations with clients about project status, risks, and timelines; communications with colleagues about work in progress and potential blockers that affect shared commitments; reporting to management about performance against targets and the accuracy of that performance data; responses to auditors, regulators, and legal counsel in formal proceedings; representations made in client proposals and tender responses; the content of contracts and financial statements; and any other professional interaction in which a colleague, a client, or the company as a whole relies on the accuracy of the information provided. The obligation applies equally in formal written communications and in informal verbal exchanges — a misleading statement made casually in a corridor conversation is no less a violation of this Code than a false statement in a formally submitted report.

The commercial pressure to present situations in the most favourable possible light, to overstate capabilities and understate risks, and to delay communicating bad news is a constant feature of competitive professional services. Proposals are written under pressure to win. Project status discussions take place against the backdrop of client expectations and contract milestones. Performance conversations occur in a context of career aspirations and compensation. This Code acknowledges these pressures explicitly and does not pretend they do not exist. What it

requires is that they are not used to justify dishonesty. The company's management culture is designed — imperfectly, but intentionally — to make honest problem-communication safer and more valued than concealment. An employee who raises a project risk proactively, who communicates a missed deadline before it is missed, or who presents an honest capability assessment in a proposal that costs the company a contract is acting with the highest professional integrity.

4.2 Accuracy of Records and Financial Integrity

Every individual who creates, approves, or submits any company record — financial, operational, HR, safety, project-related, or any other category — has a personal obligation to ensure that the record is accurate, complete, and prepared in good faith. {C['short']} maintains extensive records across its operations: timesheet records that drive accurate client billing and payroll computation; expense claims that authorise the reimbursement of legitimate business costs; project status reports that inform decisions by clients and management; financial accounts that provide legally required information to shareholders, regulatory authorities, and the Board; safety incident reports that identify hazards requiring correction; performance appraisals that determine significant career and compensation outcomes; and procurement records that document major financial commitments. Each of these records serves a specific and important purpose, and the integrity of the company's operations and governance depends on each of them being accurate.

Falsifying, manipulating, destroying, concealing, or misrepresenting any company record in any form is among the most serious violations of this Code and one that is treated as gross misconduct regardless of the individual's seniority or the apparent scale of the falsification. The acts that constitute falsification of records include: submitting a timesheet that records hours not actually worked on the billed project; submitting an expense claim that includes personal expenditure or artificially inflated amounts; misrepresenting the completion status of a project to trigger a payment milestone that the work does not yet justify; entering incorrect data into financial reporting systems; suppressing or destroying records that are relevant to an ongoing audit, investigation, or legal hold; and altering any record after the fact without appropriate documentation of the reason for the alteration.

These acts are not merely Code violations — many constitute criminal offences under the Indian Penal Code 1860 (as amended by the Bharatiya Nyaya Sanhita 2023), the Companies Act 2013, the Prevention of Money Laundering Act 2002, and other applicable legislation. The company does not treat record falsification as an internal matter to be resolved exclusively through its own disciplinary process where the conduct meets the threshold of criminal behaviour; it refers such matters to the appropriate law enforcement authorities. Employees should be aware that the scale of a falsification does not determine whether it is a criminal matter — a single falsified expense claim of a small amount is no less a false document in law

than a large one.

The company's financial controls, internal audit function, and external audit processes are designed to detect material inaccuracies in records. Employees who are aware of inaccuracies in any company record — including inaccuracies they themselves have introduced and wish to correct — should address the matter through the appropriate channel without delay: their manager and the Finance team for financial records; HR for HR records; the Legal team for records subject to a legal hold or regulatory process; and the Whistleblower hotline for concerns about systematic record manipulation by others. Voluntary disclosure of an error is treated substantively differently from a concealed error discovered through audit or investigation — voluntary self-correction, even of a significant error, is a demonstration of the Integrity value and is given significant weight as a mitigating factor in any subsequent assessment.

4.3 Intellectual Honesty and Professional Competence

Intellectual honesty — the willingness to acknowledge the limits of one's own knowledge and expertise, to present analysis and conclusions with confidence levels that accurately reflect the underlying evidence, to acknowledge genuine uncertainty when it exists rather than projecting false certainty, and to update one's position when better evidence demands it — is as central to the professional standards of Arjun Technologies as factual honesty. A technical recommendation presented with more certainty than the evidence and the recommender's experience actually support; a consulting engagement undertaken with less relevant experience than the client reasonably expects on the basis of the proposal; a data analysis submitted without adequately disclosing its assumptions, limitations, and confidence intervals — each of these constitutes an act of intellectual dishonesty that can cause real harm to clients and to the company even where no deliberate deception was intended.

Professional competence is directly connected to intellectual honesty because maintaining the level of competence required for the work one undertakes is an obligation, not merely an aspiration. An employee who accepts work requiring skills or experience they do not possess, without disclosing this gap to their manager and taking active steps to address it before the work affects a client or the company, is placing their personal comfort ahead of the quality of the service the client receives. The company invests substantially in professional development — through the annual L&D; budget of ■25,000 per employee, structured internal training programmes, mentoring, and stretch assignment opportunities — precisely because maintaining relevant competence in a rapidly evolving technology industry requires continuous and deliberate investment. The obligation on every employee is to be honest about where that investment is needed.

4.4 Honest Representation of the Company's Capabilities

In a competitive technology services market, the pressure to overstate the company's capabilities, experience, and resources in client proposals and presentations is real and persistent. This Code requires that {C['short']}'s capabilities are represented honestly in all commercial contexts. Overstating experience in a technology or domain to win a contract that the company then cannot deliver to the promised standard does not serve the client, does not serve the company's long-term reputation, and directly violates the Integrity value. It is, moreover, a form of misrepresentation that can expose the company to legal liability for misrepresentation under Indian contract law.

The obligation to represent capabilities honestly does not mean that the company cannot pursue stretch opportunities — engagements that require it to develop capabilities it does not yet fully have, or to recruit or partner for specific expertise. What it does mean is that when the company proposes to deliver work requiring capabilities it is still developing, it must be honest about that with the client and must document a credible and realistic plan for how the required capability will be developed or sourced. A proposal that describes capability the company does not have as if it were already in place is not a bold and ambitious proposal — it is a dishonest one.

Employees involved in proposal writing, pre-sales activities, or client capability presentations have a personal responsibility to ensure the accuracy of the claims they include and the claims they review. Where a proposed capability claim seems to overstate the company's actual position, the employee should raise this with the proposal lead and, if necessary, with the account manager or the relevant SVP. The fact that the claim was written by someone else does not absolve a reviewer of responsibility for knowing that it is in the document they approved or that they allowed to proceed.

4.5 Correcting Mistakes and Errors

Professional mistakes — errors of judgement, errors of execution, incorrect advice, missed deadlines, flawed analysis — are an inevitable part of professional life in a complex and fast-moving industry. This Code does not penalise mistakes as such. What it does require is that mistakes are acknowledged promptly and honestly when discovered, communicated clearly to those who are affected by or who need to know about them, and corrected as quickly and completely as circumstances allow. The concealment of a mistake — whether from management, from a client, or from colleagues who would be able to help correct it — is a separate and far more serious failure than the original error itself. A mistake that is acknowledged and corrected promptly is a learning opportunity. A mistake that is concealed and allowed to grow into a larger problem is an integrity failure.

Specifically, when an employee discovers a material error in their own work or in work they have supervised — including an error in a client deliverable, an error in a financial record, an error in a technical recommendation, or an error in a communication to a client or regulator — they must:

notify their line manager and the relevant project or account lead as soon as the error is discovered; assess and communicate the potential impact of the error on any affected party; develop and implement a correction plan as quickly as the circumstances permit; and document the error and the correction for the record. Employees should not attempt to quietly correct an error that has already been communicated externally without disclosing the fact of the correction — a correction that appears as an update without acknowledging it is a correction is itself a form of misrepresentation.

5. Conflicts of Interest

5.1 Definition — Actual, Potential, and Apparent Conflicts

A conflict of interest arises whenever an individual's personal interests — financial, relational, reputational, or personal — have the potential to influence, or could reasonably be perceived to influence, their professional judgement or decision-making in a way that is not consistent with the best interests of Arjun Technologies or its clients. Conflicts of interest are among the most common sources of ethical failure in professional organisations for two specific reasons: first, they are not always immediately obvious, because personal interests can influence judgement in subtle ways that the individual may not consciously recognise; and second, the individual who is in a conflict of interest is frequently the least well-positioned to assess objectively whether their judgement has in fact been compromised, because the same personal interest that creates the conflict also creates a tendency to see the situation as unproblematic. The disclosure obligation in this Code is designed precisely to address this blind spot.

The Code distinguishes between three categories of conflict, each of which triggers the disclosure obligation. An actual conflict of interest exists when a personal interest has already concretely influenced a professional decision — the conflict has materialised into a specific, identifiable impact. A potential conflict of interest exists when a personal interest could influence a future professional decision if the conflict is left undisclosed and unmanaged — the conflict has not yet affected a decision but creates a structural risk that it will. An apparent conflict of interest exists when the facts available to a reasonable outside observer would lead that observer to conclude that a conflict may exist, even if no actual influence has occurred and the individual believes themselves to be acting entirely objectively. The disclosure obligation applies to all three categories, because managing only actual conflicts while leaving potential and apparent conflicts undisclosed undermines the transparency that the Code requires and allows the company to take no preventive action.

The standard for determining whether a conflict of interest exists is not whether the individual subjectively believes their judgement is or will be influenced. The standard is whether a reasonable, informed person looking at the facts from the outside would conclude that a conflict exists or may exist. An employee who holds a significant financial interest in a company that is a client of the company and who participates in decisions about that client's account is in an apparent conflict of interest regardless of whether they subjectively feel that their judgement is unaffected. The appearance of a conflict, in a professional context, has real consequences for trust even where no actual influence has occurred.

5.2 Categories of Conflict and Management Approach

The most common categories of conflict of interest encountered by employees at Arjun Technologies, together with the management approach applied to each, are summarised in the

following table. This list is illustrative rather than exhaustive — situations that do not fit neatly into any of the categories below may still constitute conflicts of interest and should be disclosed. When in doubt about whether a specific situation constitutes a conflict, the correct course is always to disclose it to HR and let HR make the determination, rather than making a private judgement that it probably does not.

Category of Conflict	Common Examples	Disclosure Required	Standard Management Response
Financial interest in a related party	Holding shares of 1% or more in a client, supplier, or competitor	Immediate, using Form HR-012	Recusal from relevant decisions; potential divestment
Employment relationship involving a related party	Spouse, partner, sibling, parent, or child employed by a client, supplier, or competitor	At time of joining or when relationship arises	Case-by-case assessment; may require recusal or role change
Outside employment or directorship	Part-time consulting work for a non-profit, advisory board seat, or start-up	Prior to accepting the engagement	Written approval or rejection; may require limiting hours or duties
Involvement in procurement decisions	Participating in vendor selection for a company in which you have a personal interest	Before the procurement process begins	Exclusion from the procurement process; alternative assignment
Material non-public information	Receiving confidential client or market information that could affect trading decisions	Immediately upon receipt	Restriction from trading; escalation to Legal and Compliance
Personal romantic relationship	Romantic relationship with a direct reporting line or someone in a position of influence	Before the relationship develops beyond casual	Reassignment of reporting lines; written acknowledgement

5.3 Disclosure Obligations and Process

Every covered individual must disclose any actual, potential, or apparent conflict of interest to HR promptly using the Conflict of Interest Disclosure Form (HR-012), which is available on the HRMS portal under HR Services. The obligation to disclose arises at the earlier of the following: at the time of joining the company, if the conflicting interest already exists at that point; at the point when the employee becomes aware that a conflicting interest is developing or has developed; or at the point when the employee is assigned to a role, project, client, or procurement process where a pre-existing personal interest becomes directly relevant. Waiting until a conflict has already influenced a decision before disclosing it does not satisfy the disclosure obligation — the obligation is preventive, not remedial.

Submitting a Conflict of Interest Disclosure Form is a demonstration of the Integrity value, not an admission of wrongdoing. HR and Legal review every disclosure within five working days of receipt and respond with one of three outcomes: a clearance confirming that no management action is required; a management plan specifying the recusals, structural adjustments, or other measures necessary to manage the conflict appropriately; or a request for additional information before a determination can be made. Disclosures and their outcomes are maintained in a confidential Conflict of Interest Register accessible only to HR and Legal. Senior management reviews a sanitised summary of the register annually as part of the governance oversight of the ethics programme. No disclosure in the register is attributed to a named individual in the summary provided to senior management.

Non-disclosure of a known conflict of interest is itself a Code violation, and is treated more seriously than a properly disclosed conflict that has been appropriately managed — because non-disclosure prevents the company from taking any steps to protect its interests or those of its clients, and because it represents a specific and deliberate failure of the Integrity standard.

Where a non-disclosed conflict is discovered — through an audit, an investigation, a third-party complaint, or any other means — the investigation addresses both the nature of the underlying conflict and the failure to disclose. Both elements contribute to the assessment of the appropriate disciplinary consequence.

5.4 Outside Employment and Directorships

Employees of Arjun Technologies are employed to devote their professional time, energy, and capabilities primarily to the company's business. Secondary employment — whether paid or unpaid — is not automatically prohibited, but it is subject to prior written approval because of the range of ways in which it can create conflicts of interest, compromise the company's confidential information, or reduce the quality of the employee's contribution to their primary role. Approval will be denied where the secondary activity involves work for a current or prospective client, competitor, or supplier of the company; where it would require the use of company time, equipment, systems, or intellectual property; where the time commitment would materially reduce the employee's availability and focus in their primary role; or where it creates a conflict of interest that cannot be adequately managed through recusal or other structural measures.

Directorships — whether executive, non-executive, or advisory — at any other company are subject to the same prior approval requirement as any other form of outside employment. Directors have fiduciary duties to the companies they serve, and those duties can create real and significant conflicts with the employee's obligations to this company. An employee who serves on the board of a client company, for example, has both fiduciary duties to that client and commercial obligations to the company — and these can conflict in ways that are difficult to manage without complete structural separation from any decision-making that affects both. The approval process for directorships involves the Legal team and the relevant SVP in addition to HR, given the complexity of the legal obligations involved.

Employees who are approved for outside employment or a directorship must disclose the approval and the nature of the outside activity annually as part of the annual Conflict of Interest Register update, and must re-apply for approval if any material change occurs — including a change in the nature or scope of the outside activity, a change in the company's relationship with the relevant entity (for example, if the entity becomes a client or supplier), or a change in the employee's role within the company that creates a new potential for conflict.

5.5 Personal Relationships in the Workplace

Personal relationships between colleagues are a natural feature of any organisation in which people work closely together over extended periods. This Code does not seek to restrict or regulate personal friendships and collegial relationships, which are a positive feature of a functioning workplace culture. It does require that personal relationships — including romantic

relationships — that create a supervisory or evaluative dynamic are disclosed and managed, because the professional obligations of supervision, performance assessment, compensation, and disciplinary management cannot be discharged with the objectivity they require when the supervisor has a close personal relationship with the person being supervised.

Where a personal relationship develops between two employees who are in a direct or indirect reporting relationship — or where existing colleagues find themselves in such a relationship as a result of a structural change — both individuals must disclose the relationship to HR as soon as it develops. The company's response is typically to adjust the reporting structure to eliminate the direct supervisory relationship, not to require either individual to leave the company. The specific adjustment depends on the roles and seniority of the individuals involved and the operational constraints of the relevant business unit. No adverse consequence is applied to either individual solely as a result of the disclosure; the obligation is to disclose so that the structural issue can be addressed, not to prevent the relationship.

6. Gifts, Hospitality, and Anti-Corruption

6.1 Zero-Tolerance Anti-Bribery and Anti-Corruption Policy

Arjun Technologies maintains an absolute zero-tolerance policy toward bribery and corruption in all their forms, without exception. This policy applies to all employees, contractors, and third parties acting on the company's behalf, and it applies with equal force to dealings with private sector organisations and with public officials at any level of government. No employee or contractor may offer, promise, give, authorise, request, agree to receive, or accept any bribe, kickback, facilitation payment, or other improper financial or non-financial advantage in connection with the company's business, regardless of the amount involved, the local commercial custom or practice, the competitive pressure of the situation, or the instruction of any superior. These qualifications are stated explicitly because they are the justifications most frequently offered for corrupt acts, and none of them provide a valid justification.

The Prevention of Corruption Act 1988, as substantially strengthened by the Prevention of Corruption (Amendment) Act 2018, creates criminal liability for both the giver and the recipient of a bribe to a public official, with penalties including imprisonment for a minimum of three years and a maximum of seven years. The 2018 amendment importantly creates criminal liability for the organisation itself — not only for the individual who offers or pays the bribe — where the organisation failed to prevent the bribery. This corporate criminal liability makes the company's anti-corruption programme not merely an ethical requirement but a legal necessity. Every employee is personally responsible for compliance with anti-corruption laws, and the company will not provide any protection or indemnification to employees who engage in corrupt conduct.

Facilitation payments — informal payments made to government or regulatory officials to expedite the performance of routine administrative functions that the official is legally obligated to perform in any case — are prohibited by this Code regardless of their amount, their local acceptability, or the operational inconvenience that refusing them may cause. The legal and reputational risk of making facilitation payments — which are prohibited by the Prevention of Corruption Act whether or not they are locally considered acceptable — is greater than the operational inconvenience of refusing. Employees who are asked to make a payment that may constitute a facilitation payment must refuse, must document the demand or request in writing immediately after it occurs, and must report it to the Legal team and their line manager without delay. The company will support employees who refuse to make improper payments and will manage any commercial consequence of such refusal without adverse impact on the employee.

The anti-corruption obligations of this policy extend, where relevant, to international anti-corruption legislation applicable to specific client engagements. Employees working on engagements with clients subject to the United Kingdom Bribery Act 2010 — one of the broadest anti-corruption statutes in the world, which prohibits corrupt payments anywhere in the world in

connection with a UK business — or the United States Foreign Corrupt Practices Act 1977 must be aware of the specific requirements of those statutes, which in some respects go beyond Indian law. The Legal team provides country-specific anti-corruption briefings for client engagements with significant international dimensions, and employees should request such briefings before entering into commercial negotiations in jurisdictions with elevated corruption risk.

6.2 Gift and Hospitality Standards and Thresholds

The giving and receiving of gifts, business entertainment, and professional hospitality is a recognised and normal dimension of business relationship management in the technology services industry. The company does not prohibit it categorically; it establishes clear standards for what is acceptable and what is not. The guiding principle is that any gift or hospitality must be of a nature and value that could not reasonably be intended to influence a business decision and would not reasonably be perceived to influence a decision by an objective outside observer. When doubt exists about whether a specific gift or hospitality situation falls within acceptable boundaries, the transparency test from Section 3.2 should be applied: would accepting or providing this gift or hospitality be comfortable under full public scrutiny? A negative answer to that question is a strong indicator that the gift or hospitality should be declined or not provided.

Category	Per-Occasion Threshold	Permitted Without Pre-Approval	Approval, Disclosure and/or Prohibition
Gifts received from clients, vendors, or business partners	₹2,500 per occasion	Token promotional items and gifts of nominal value	Any gift above ₹2,500 must be declined or returned; Gift Register entry mandatory
Business meals and entertainment	₹3,000 per person	Business meals below ₹3,000 per person where the client is present	Above ₹3,000 per person requires manager approval and Gift Register entry
Travel or accommodation	Zero — all third-party travel requires approval	None	All third-party funded travel and accommodation, regardless of value, must be approved in advance
Gifts provided to clients, vendors, or business partners	₹2,500 per occasion	Branded promotional materials, pens, diaries, and calendars	Gifts above ₹2,500 require manager approval and Gift Register entry
Business entertainment between employees	₹5,000 per person	Business entertainment below ₹5,000 per person	Above ₹5,000 per person requires manager approval and Gift Register entry

6.3 The Gift and Hospitality Register

The Gift and Hospitality Register is the company's primary control mechanism for monitoring compliance with the gift and hospitality standards described in this section. It is maintained by the Finance team and must be updated by the employee within five working days of receiving or providing any gift or hospitality above the disclosure thresholds. The register records the name of the giver or recipient and their organisation, the nature and estimated value of the gift or hospitality, the date on which it was received or provided, the business relationship that justifies it, whether manager approval was obtained, and any other relevant contextual information that allows the register to provide a complete and accurate record.

The register is reviewed quarterly by the General Counsel and is included in the annual Audit Committee review of the company's anti-corruption programme. Patterns that emerge from the register — repeated gifts from a specific vendor, hospitality above threshold levels from a party

to a recent procurement, or a high frequency of gift events from or to a specific individual — may trigger a more detailed review by Legal and HR to determine whether the pattern is consistent with the company's anti-corruption standards. Employees should record all required entries accurately and completely, understanding that the register is an active governance tool rather than a bureaucratic formality.

Employees who are uncertain whether a specific gift or hospitality event requires disclosure should apply the principle that disclosure is always safer than non-disclosure. A disclosure that turns out not to have been strictly necessary carries no negative consequence. An undisclosed gift that later comes to light — particularly in the context of a procurement challenge, a client complaint, or a regulatory enquiry — carries significant reputational and disciplinary risk for the individual. When in doubt, record it.

6.4 Anti-Corruption Due Diligence for Third Parties

The company's anti-corruption obligations extend to the conduct of third parties who act on its behalf — including agents, consultants, joint venture partners, and other intermediaries who interact with government officials or clients on the company's behalf. An improper payment made by an agent on the company's behalf, where the company knew or should have known of the risk, can expose the company to the same criminal and regulatory liability as if the payment had been made directly. The company therefore applies anti-corruption due diligence to all third parties engaged to act on its behalf in contexts where corruption risk is elevated.

Anti-corruption due diligence for third parties includes: verifying the identity and background of the third party and its principals; assessing the reputation and track record of the third party in relevant markets; evaluating the commercial rationale and reasonableness of any commission or fee arrangement; including anti-corruption representations and warranties in all engagement agreements; requiring the third party to agree in writing to the company's anti-corruption standards as a condition of engagement; and monitoring the third party's conduct during the engagement for any red flags suggesting that improper payments may be contemplated or have been made. The Legal team provides guidance on the specific due diligence steps required for each category of third-party engagement based on the corruption risk profile of the specific context.

Certain commercial practices in certain markets constitute red flags that require heightened attention and Legal review before the company proceeds. These include: unusually high commission or fee arrangements that appear disproportionate to the services being provided; requests for payments to be made through unusual channels or to third-party accounts; requests that the purpose of a payment be described in a way that does not accurately reflect its actual purpose; agents or consultants who are known associates of government officials; and any situation where the company is asked to make a payment that cannot be fully and accurately

described in the relevant contract and company accounts. Employees who encounter any of these red flags in the course of commercial negotiations must consult the Legal team before proceeding.

Segment 1 Summary and Continuation

This completes Segment 1 of the Arjun Technologies Code of Conduct. Segment 1 has covered the foundational sections of the Code: the Chief Executive's message establishing the personal and institutional commitment to ethical conduct; the purpose, scope, and application of the Code; the six Core Values as operational conduct standards and the four-question ethical decision framework; the detailed provisions on integrity and honesty including honest communication, accuracy of records, and professional competence; the comprehensive conflict of interest policy including disclosure obligations and management approaches; and the anti-corruption provisions including zero-tolerance bribery policy and detailed gift and hospitality thresholds.

Segment 2 continues with Section 7 (Confidentiality and Information Obligations), Section 8 (Workplace Conduct and Professional Standards), Section 9 (Anti-Harassment, Discrimination, and Equal Opportunity), Section 10 (Digital Conduct, Social Media, and AI Ethics), and Section 11 (Political Activity and External Roles). Segment 3 covers Section 12 (Environmental, Social, and Governance Responsibilities), Section 13 (Whistleblowing and Speaking Up), Section 14 (Consequences of Code Violations), and all five appendices including the ethical decision-making framework, scenario guidance, and the formal acknowledgement form. All segments are available on the HRMS portal under Policies and Documents.

Segment	Content	Pages	Availability
Segment 1 — This Document	CEO Message · Purpose & Scope · Values · Integrity · Conflicts of Interest · Gifts & Anti-Corruption	1 – 40	Published April 2024
Segment 2	Confidentiality · Workplace Conduct · Anti-Harassment · Digital Conduct · Political Activity	41 – 80	Published April 2024
Segment 3	ESG · Whistleblowing · Consequences · Appendices A–E	81 – 120	Published April 2024

The current version of all three segments is available on the HRMS portal under Policies and Documents. For queries about any provision, contact hr@arjuntech.in or Mr. Sandeep Iyer at legal@arjuntech.in. For concerns about potential violations, use the Whistleblower hotline at ethics@arjuntech.in (available 24/7, anonymous reporting supported).

CODE OF CONDUCT

Segment 2 of 3

Version	2.4	**Effective Date**	01 April 2024
Review Date	31 March 2025	**Classification**	Internal Use Only
Approved By	Mr. Rajesh Arjun	**Document Owner**	Ms. Priya Menon
Legal Review	Mr. Sandeep Iyer	**Department**	Human Resources & Legal
Doc Ref.	HR-COC-001-v2.4	**Segment**	2 of 3 (Pages 41–80)

This is Segment 2 of the Arjun Technologies Pvt. Ltd. Code of Conduct, Version 2.4. It covers Sections 7 through 11: Confidentiality and Information Obligations, Workplace Conduct and Professional Standards, Anti-Harassment and Discrimination, Digital Conduct and AI Ethics, and Political Activity and External Roles. It must be read alongside Segment 1 (foundational principles, conflicts of interest, anti-corruption) and Segment 3 (ESG, whistleblowing, consequences, appendices). All segments available on HRMS. Queries to hr@arjuntech.in or legal@arjuntech.in.

7. Confidentiality and Information Obligations

7.1 The Duty of Confidentiality

Every individual covered by this Code has a duty to maintain the confidentiality of sensitive information obtained in the course of their professional activities at Arjun Technologies. This duty is not limited to information that has been formally classified and labelled as confidential under the company's information classification scheme. It extends to any information that a reasonable professional would recognise as sensitive by its nature, regardless of whether a formal classification label has been applied. The categories of information that a reasonable professional should treat as confidential include: the names, requirements, systems, and data of the company's clients; source code, technical architectures, algorithms, and proprietary methodologies developed by or for the company; financial data including revenue figures, cost structures, and commercial contract terms; personnel information including individual salaries, performance assessments, and disciplinary matters; strategic plans and product roadmaps; details of ongoing negotiations, disputes, or regulatory matters; and any other information whose disclosure to an unauthorised party could harm the company, a client, an employee, or any other stakeholder.

The confidentiality obligation applies at all times and in all contexts — in the office, at home while working remotely, at client sites, during business travel, at industry conferences and professional events, in digital communications, and in conversations with family members, friends, or former colleagues who have no professional right to the information. The setting and the formality of the interaction do not affect the sensitivity of the information. Sensitive business information discussed casually in a restaurant, overheard in a hotel lobby, or shared in a text message to a personal contact is just as much a confidentiality breach as information disclosed in a formal written report. The portability of work into personal contexts — a defining feature of modern professional life — creates a corresponding extension of the confidentiality obligation into those personal contexts whenever company or client information is involved.

The confidentiality obligation survives the termination of employment for the periods specified in the employment contract — currently two years under the general NDA provisions and without time limit for information designated as Restricted under the company's information classification scheme. Former employees who receive requests from prospective employers, journalists, competitors, researchers, or any other parties for information about the company's clients, systems, pricing, personnel, or business affairs must decline to provide any such information and, where the request is persistent, systematic, or concerning in its nature, should notify the company's Legal team. The post-employment confidentiality obligation is legally enforceable and the company will exercise its legal rights in cases of material breach.

7.2 Client Confidentiality

Client confidentiality is the most important and most frequently tested dimension of the confidentiality obligation for employees in a client services organisation like Arjun Technologies. Clients share information — about their systems and architectures, their operational processes, their strategic plans, their financial data, and in many cases the personal information of their own customers and employees — because they have made a specific judgement that the company has both the technical competence and the organisational discipline to protect that information. The trust implicit in that judgement is commercially foundational. A single significant breach of client confidentiality — the disclosure of a client's system architecture to a competitor, the exposure of client personal data through a careless handling practice, the casual mention of a client's unreleased product strategy in a conference conversation — has the potential to destroy years of earned trust and to expose the company to significant legal and financial liability under both the client contract and applicable data protection legislation.

The obligation to protect client confidentiality extends to the fact of the client relationship itself in certain cases. Where a client has specifically requested confidentiality about the existence of the engagement — which is common in competitive or politically sensitive industries — employees must not mention the client's name in conversations, social media posts, conference presentations, or any public forum, even in a positive or complimentary context. The company's Communications team maintains a list of clients who have consented to being named as references or case study subjects. Employees must verify with Communications before mentioning any client's name publicly, even where they have no reason to believe confidentiality has been specifically requested. The default assumption must be that client relationships are confidential unless Communications has confirmed otherwise.

Client confidentiality obligations do not end when an employee moves to a different project or a different employer. An employee who transitions from a project for Client A to a project for Client B — particularly where Client B is a direct competitor of Client A in the same industry — is not permitted to share any information about Client A's systems, processes, vulnerabilities, strategies, or pricing with Client B, even where that information would be commercially valuable to Client B and might strengthen the company's relationship with them. This restriction is absolute. The commercial attractiveness of using one client's knowledge to benefit another client does not create an exception to the confidentiality obligation — it is precisely the scenario the obligation is designed to prevent.

Where an employee is uncertain whether a specific piece of information about a client may be shared with another party — including another client, a potential sub-contractor, or a colleague who is not currently working on that client's account — the correct approach is to treat the information as confidential until the account manager and Legal have confirmed that sharing is permitted and appropriate. The burden of establishing that sharing is appropriate rests with the person who wants to share, not with those who might seek to prevent it.

7.3 Handling and Protecting Confidential Information

The practical handling of confidential information — the specific behaviours that protect sensitive data in the course of day-to-day work — is governed in detail by the IT Security Policy and the Data Privacy Policy. The Code of Conduct establishes the ethical obligation that underlies those technical and procedural requirements: the obligation to treat all confidential information with the same care and discretion that a reasonable professional would want their own sensitive personal and professional information to be treated. The following conduct standards apply to all employees handling confidential information regardless of format or medium.

Context	Required Conduct	Prohibited Conduct
Email and digital communications	Verify recipients before sending confidential information; use company-managed email accounts for	Sending confidential information to personal email addresses; using
Physical documents	Store confidential printed documents in locked drawers or cabinets when not in use; clear the desk of	Leaving confidential documents visible on the desk overnight; disca
Screen and device security	Lock the screen immediately when leaving the workstation, even briefly; enable automatic screen lock after	Leaving a laptop unattended in a public place; sharing login credentials
Conversations and meetings	Conduct conversations involving confidential information in private settings; use private meeting rooms for	Discussing sensitive matters in open areas, public transport, or social
Disposal	Use the company's confidential waste service or cross-cut shredders for all printed confidential	Placing confidential documents in general waste bins or recycling

7.4 Personal Data and the DPDP Act 2023

The Digital Personal Data Protection Act 2023 creates specific legal obligations for the handling of personal data — data relating to an identified or identifiable natural person — that Arjun Technologies handles in the course of its business. As a Data Fiduciary under the Act, the company is legally required to process personal data only for specified, legitimate purposes; to implement appropriate technical and organisational security measures to prevent personal data breaches; to respond to data principal requests to access, correct, or erase personal data within prescribed timelines; and to notify the Data Protection Board of India of personal data breaches that are likely to cause harm. Employees who handle personal data in the course of their work — including employee data, client employee data, and end-user data processed in client engagements — have a personal obligation to handle that data in accordance with both this Code and the company's Data Privacy Policy.

The most important personal data conduct obligations for employees are: collecting only the personal data that is genuinely necessary for the specific, identified purpose; not using personal data for purposes other than those for which it was collected without new consent or a lawful basis; retaining personal data only for as long as necessary for the stated purpose and then deleting it; never sharing personal data with third parties who do not have a lawful basis and appropriate security measures to receive it; and reporting any actual or suspected personal data breach to the IT Security team immediately upon discovery. A personal data breach is not limited to a deliberate act — an email sent to the wrong recipient containing personal data, a laptop containing personal data left on public transport, or a misconfigured cloud storage resource that exposes personal data to the internet are all personal data breaches that trigger reporting obligations under the DPDP Act.

8. Workplace Conduct and Professional Standards

8.1 General Professional Standards

The professional conduct expected of every individual at Arjun Technologies is grounded in a fundamental respect for the time, effort, and professional reputation of every person with whom they interact — colleagues, clients, managers, direct reports, vendors, and candidates. Professional standards are not a list of minimum requirements designed to prevent the worst outcomes; they are a description of the conduct that the company expects as the normal, consistent baseline from everyone who works here, and that reflects the kind of organisation it has built and continues to build. An individual who meets these standards reliably contributes to a professional environment in which everyone can do their best work. An individual who repeatedly falls below them — even where each individual instance seems minor — gradually degrades the quality of the environment for everyone around them.

Professional conduct encompasses several distinct dimensions that together define what it means to be a reliable, effective, and trustworthy professional colleague and partner. Reliability is the first: meeting commitments made to clients and colleagues on time and at the quality agreed; arriving at meetings prepared and on time; completing assigned work by agreed deadlines or communicating proactively well before a deadline when delivery is not possible; and following through on every commitment regardless of its scale. The fact that a commitment is small — a quick email response, a brief document review, a message to confirm a meeting time — does not reduce the obligation to honour it. Unreliability in small commitments predicts unreliability in large ones and erodes the collegial trust on which effective teamwork depends.

Communication quality is the second dimension of professional conduct. Professional communication — whether in person, in writing, or digitally — should be clear, accurate, concise, and respectful in tone regardless of the subject matter or the stress of the situation. Dismissiveness, condescension, sarcasm, passive aggression, or unnecessary bluntness in professional communications are conduct issues, not merely style preferences. The manner in which feedback is delivered, a disagreement is expressed, or a difficult message is communicated is as professionally significant as the content of the communication itself. A correct and necessary message delivered in a manner that is disrespectful, condescending, or aggressive causes harm that the correctness of the underlying message does not mitigate.

Respect for the time and attention of colleagues is the third dimension. Meetings should be called only when they are the most effective way to accomplish a specific objective, should have a clear agenda, should start and end on time, and should include only the people whose participation genuinely contributes to the objective. An employee who accepts a meeting invitation but attends while simultaneously working on unrelated tasks on a second screen is demonstrating a lack of respect for every other participant in that meeting — their physical

presence is not the same as their professional engagement. Communication channels — particularly asynchronous channels such as email and messaging platforms — should be used in ways that do not create unreasonable expectations of immediate response or create an ambient pressure to be constantly available outside normal working hours.

8.2 Attendance, Working Hours, and Time Integrity

The company's attendance and working hours policies are described in detail in the Employee Handbook and governed by the applicable provisions of the Shops and Establishments Act in each state of operation. This Code adds the ethical dimension that the handbook's administrative provisions do not explicitly address. Attendance management is not merely an operational compliance obligation — it is an expression of professional honesty toward the employer, toward clients who have contracted for the delivery of work, and toward colleagues whose own delivery commitments depend on the contribution of every team member. An employee who records attendance they have not provided — whether by recording hours not worked, by clocking in and out through a third party, or by marking leave as sick leave when it is not — is committing an act of dishonesty that is no less a Code violation for being commonplace in some professional cultures.

Timesheet accuracy deserves specific emphasis in a client services context. Client billing at this company is frequently based on the time recorded by employees against specific client projects and activities. A timesheet that inaccurately records time against a client project — whether by over-reporting to meet a billable hours target, by under-reporting to avoid scrutiny, or by allocating time to the wrong project or activity — is a falsification of a financial record that affects client billing accuracy and the integrity of the company's financial accounts. Timesheet accuracy is therefore both a Code obligation and a matter of the financial integrity provisions in Section 4.2. The pressure to meet billable hours targets — which is a real and persistent feature of professional services — does not create an exception to the requirement for accurate time recording.

The hybrid working model creates specific time integrity considerations that do not arise in a fully office-based environment. An employee working from home has a personal obligation to be genuinely present and productive during their agreed working hours — to be responsive to colleagues and clients during core hours, to attend committed meetings on time and fully prepared, to produce the same quality and volume of output on remote days as on office days, and to not use the absence of physical supervision as an opportunity to attend to personal matters during working hours. The company extends the privilege of hybrid working based on trust that employees will honour these obligations; the repeated abuse of that trust is both a conduct issue and a performance issue.

8.3 Use of Company Resources

Company resources — working time, equipment, software licences, network infrastructure, office facilities, and intellectual property — are provided for legitimate business purposes. Incidental personal use of certain company resources — brief personal internet use, occasional personal printing, short personal calls on a company phone — is tolerated in moderation where it does not impair work performance, does not consume significant resources, and does not violate any law or policy. The operative word is moderation: personal use that is brief, occasional, and proportionate is a normal feature of working life. Personal use that is sustained, systematic, or that materially detracts from the time and energy available for professional work is not.

The following uses of company resources are prohibited in all circumstances and constitute Code violations subject to disciplinary consequences: using company time, equipment, or systems for secondary employment or any activity that generates personal income without prior approval; using company systems to access, store, or distribute illegal content of any kind; using company resources for political campaigning or personal commercial activities; using company equipment to conduct personal business transactions; allowing personal contacts — including family members — to use company equipment; and deliberately misusing, damaging, or destroying any company property or equipment. Employees who accidentally damage company equipment must report it to the Administration or IT team promptly; concealing accidental damage is treated as a conduct issue separate from the damage itself.

Intellectual property created by an employee in the course of their work at Arjun Technologies — including source code, algorithms, technical designs, business processes, creative works, research outputs, and any other product of the employee's professional activities here — belongs to the company from the moment of its creation, as established by the employment contract. Employees must not commercialise, disclose, or assert personal ownership rights over work created in the course of their employment without prior written consent from the Legal team. Open source contributions from personal accounts are governed by the company's Open Source Policy and require review before any company-related work is contributed to an external repository.

8.4 Workplace Safety and Environmental Conduct

Every employee has a personal obligation to contribute actively to the safety of the workplace environment. This obligation encompasses: following all posted safety procedures and instructions at each office location; participating in mandatory safety training and emergency evacuation drills; reporting any hazard, unsafe condition, or near-miss incident to the designated Safety Officer immediately upon discovery, regardless of how minor it appears; not interfering with, modifying, or bypassing any safety equipment, fire protection system, or emergency communication infrastructure; and cooperating fully with safety inspections and investigations. A safety concern that is observed but not reported is a safety failure that is partly attributable to the

person who knew and did not act.

Environmental conduct in the workplace reflects the company's broader ESG commitments described in Section 12 of Segment 3. In the day-to-day context of the workplace, this means: powering down equipment when not in active use rather than leaving it in power-consuming standby states; printing only when genuinely necessary and using double-sided and recycled paper when printing is required; following the company's e-waste and confidential waste disposal procedures rather than placing electronic equipment or sensitive documents in general waste bins; using video conferencing for meetings that do not require physical attendance rather than defaulting to travel; and supporting the facilities management team's sustainability initiatives rather than working around them for personal convenience.

9. Anti-Harassment, Discrimination, and Equal Opportunity

9.1 Commitment to a Respectful and Inclusive Workplace

Arjun Technologies is unconditionally committed to building and maintaining a workplace that is respectful, psychologically safe, and genuinely inclusive — a workplace where every individual, regardless of their gender, gender identity or expression, religion or religious belief, caste, race, ethnicity, national origin, age, disability, sexual orientation, marital status, pregnancy or maternity, or any other personal characteristic that is irrelevant to their professional qualifications and contribution, is treated with equal dignity, has equal access to the opportunities that the company offers, and feels genuinely valued as a member of the professional community. This is not a legal compliance position — although it is that. It is a genuine ethical commitment grounded in the company's Inclusion value and in the understanding that diverse teams with genuinely inclusive cultures produce better outcomes for clients, better commercial performance, and a better experience for every individual within them.

Harassment, in any of its forms, is one of the most harmful things that can happen in a workplace. It damages the health, wellbeing, confidence, and career trajectory of the individual who experiences it. It corrupts the professional environment for everyone who witnesses it or becomes aware of it. It exposes the organisation to significant legal and reputational liability. And it directly and specifically contradicts every value that this organisation states it holds. The company's zero-tolerance position on harassment is not aspirational — it is enforced consistently, and consistently means that a single act of serious harassment, particularly one involving a power imbalance between the perpetrator and the target, can and does result in termination of employment regardless of the seniority, tenure, or commercial importance of the person responsible.

The obligation to maintain a respectful and inclusive workplace is not limited to refraining from personally engaging in harassing or discriminatory conduct. It extends to actively creating conditions — through the language used, the behaviours modelled, the decisions made about inclusion and belonging, and the willingness to challenge conduct that falls below the standard — in which every individual can participate fully and equitably. Bystander inaction in the face of clearly unacceptable conduct — the choice to observe harassment without intervening or reporting — is itself a failure of the Inclusion and Accountability values, though the primary responsibility always rests with the individual engaging in the conduct.

9.2 Prohibited Conduct — Categories and Examples

The following categories of prohibited conduct are defined in sufficient detail to allow employees to recognise conduct that requires either challenge or reporting. These categories are illustrative rather than exhaustive — conduct that does not fit neatly into any category listed below may nonetheless be prohibited and reportable if a reasonable professional would recognise it as

harmful and inconsistent with the standards this Code requires.

Category	Definition	Representative Examples	Reporting Channel
Sexual Harassment (POSH Act 2013)	Any unwelcome act or behaviour	Unwanted physical contact; advances;	Internal Complaints Committee (ICC)
Harassment on a Protected Characteristic	Any verbal, physical, visual, or digital conduct	Derogatory comments; jokes;	HR Business Partner;
Workplace Bullying	A sustained pattern of behaviour	Repeated public criticism;	HR Business Partner;
Discrimination in Employment Decisions	Making an employment decision	Declining to interview;	HR Business Partner;
Victimisation and Retaliation	Treating an individual less favourably	Reassigning; creating a hostile;	HR Business Partner;

9.3 Prevention of Sexual Harassment — POSH Act Provisions

Arjun Technologies complies fully with the Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act 2013 and the rules made thereunder. An Internal Complaints Committee has been constituted as required by the Act, comprising a senior woman employee as Presiding Officer, two employee members with a commitment to women's welfare issues, and one external member from a non-governmental organisation focused on women's welfare and rights. The ICC has been constituted at the company level with designated Presiding Officers at each office location. Contact details for the ICC at each location are published on the company intranet and communicated to all employees at joining and during mandatory annual POSH awareness training.

Any employee who believes they have experienced sexual harassment in the workplace may file a written complaint with the ICC within three months of the date of the incident, or within three months of the last in a series of incidents. The ICC may extend this period by up to three months where the complainant demonstrates sufficient cause for the delay. Complaints may also be filed by a third party on behalf of an aggrieved employee where the employee is unable to make a complaint due to physical or mental incapacity. The ICC acknowledges receipt of every complaint within five working days and completes its inquiry within 90 days, providing both the complainant and the respondent with a full and fair opportunity to present their case and any supporting evidence or witnesses.

Before filing a formal complaint, any employee who wishes to discuss a concern confidentially — to understand what constitutes sexual harassment under the Act, to consider whether their experience meets the threshold for a formal complaint, or simply to have a trusted conversation with someone about what has happened to them — may contact the ICC Presiding Officer or the HR Business Partner in complete confidence. This initial confidential discussion does not constitute a formal complaint and does not trigger any formal proceedings unless the employee explicitly requests that it do so. The company strongly encourages employees to make use of this option rather than either suffering in silence or feeling pressured to file a formal complaint immediately when they are still uncertain about how they wish to proceed.

All proceedings under the POSH Act are conducted with strict confidentiality. The identities of the complainant, the respondent, and all witnesses are protected and must not be disclosed to the press, social media, or to any party outside the ICC process and the company's management. Any person who discloses confidential POSH proceedings information — including employees who discuss ongoing investigations with uninvolved colleagues — will face separate disciplinary action independent of the outcome of the investigation itself. Retaliation against any complainant or witness for their participation in ICC proceedings is itself a serious offence under the Act and will be treated as gross misconduct under this Code.

9.4 Equal Opportunity and Reasonable Adjustment

Arjun Technologies is an equal opportunity employer in the fullest operational sense of that commitment. All employment decisions — recruitment, assignment, promotion, compensation, training and development opportunity allocation, performance assessment, and separation — are made strictly on the basis of merit, demonstrated performance, and legitimate business criteria. No employment decision at this company should ever be made on the basis of a protected characteristic. Where an employment decision appears to have been influenced by a protected characteristic, affected individuals have the right to raise a formal grievance and to have that grievance independently investigated. Managers who make employment decisions on the basis of protected characteristics — including protected characteristics they regard as proxies for capability, such as gender-based assumptions about commitment or caste-based assumptions about aptitude — are in serious violation of this Code and will face the full range of disciplinary consequences.

The company makes reasonable adjustments for employees with disabilities, chronic health conditions, and mental health conditions to enable them to perform the essential functions of their role effectively and to participate in the professional opportunities available at the company. The obligation to make reasonable adjustments is both a legal requirement under applicable Indian law and an expression of the Inclusion value. Employees who require an adjustment to their working environment, schedule, equipment, or responsibilities because of a health condition or disability should contact their HR Business Partner in confidence to discuss what adjustments may be appropriate and practicable. All such requests are treated with full confidentiality, genuine care, and a presumption of accommodation — the starting point is 'how can we make this work?' not 'what are the reasons this might not be possible?'

10. Digital Conduct, Social Media, and AI Ethics

10.1 Digital Communication Standards

The professional conduct standards that apply to in-person interactions apply with equal force to all digital communications — email, instant messaging, video calls, collaboration platform discussions, project management comments, code review annotations, and any other digital channel through which employees of Arjun Technologies communicate with colleagues, clients, partners, vendors, or candidates. A communication that is dismissive, sarcastic, condescending, or aggressive in tone is no less a conduct issue because it is expressed in a Slack message rather than face to face. A code review comment that is personally critical rather than professionally substantive causes the same harm to the recipient whether it is posted in a pull request or said aloud in a meeting. The digital medium does not create a zone of reduced professional accountability or reduced obligation to treat other people with respect.

Digital communications have characteristics that make poor communication choices particularly consequential. They are persistent — once sent, a digital message cannot be taken back, and it may be forwarded, screenshotted, or preserved in ways that make its content available long after the interaction that produced it. They are easily misconstrued — the absence of facial expression, body language, and vocal tone means that intended humour reads as sarcasm, intended brevity reads as rudeness, and intended directness reads as aggression more easily in text than in person. They can scale instantaneously — a message forwarded to the wrong recipient or a message sent to the wrong channel can reach an unintended audience of hundreds in seconds. These characteristics are reasons for greater care and deliberation in digital communication, not for less.

Employees should operate on the assumption that all digital communications made using company systems — email, Teams, Slack, GitHub, HRMS, and any other company-managed platform — are permanent records that may be reviewed in appropriate circumstances by HR, Legal, external auditors, or law enforcement. The company does not monitor the content of individual employee communications as a routine surveillance practice, and this Code does not create any such monitoring programme. However, the company does reserve the right to access communications on its systems in the context of a disciplinary investigation, an audit, a regulatory inquiry, a legal hold, or litigation. Employees should conduct themselves in all digital communications as if those communications might at some point be reviewed by any of these parties.

The practice of pausing before sending any digital communication that involves a sensitive topic, a disagreement, a criticism, or strong emotion — and re-reading the message with the question 'would I be comfortable saying this in person in front of a senior manager?' — is strongly recommended. The delay costs seconds. The alternative — a message that is regretted

immediately after it is sent but cannot be recalled — can cost professional relationships, client trust, and in serious cases careers. This recommendation is particularly important for communications sent late in the day, under deadline pressure, or in the immediate aftermath of a frustrating interaction.

10.2 Social Media Policy

Employees of Arjun Technologies are personally responsible for all professional content they publish on social media platforms and professional networks — including LinkedIn, X (formerly Twitter), Instagram, Facebook, YouTube, GitHub public repositories, personal professional blogs, technical forums such as Stack Overflow, and any other publicly accessible digital channel — that relates to their professional life, identifies or could reasonably lead a reader to identify them as an employee of this company, or touches on topics connected to the company's business, clients, technology, or the industry in which the company operates. Social media content is visible, searchable, persistent, and potentially viral in ways that any individual post may appear to make it unlikely — but professional consequences from social media posts are a sufficiently common and significant feature of professional life to warrant consistent caution.

The specific social media conduct obligations that apply to all covered individuals are as follows. Company confidential information — including client names and engagement details without prior Communications team approval, specific project details that have not been publicly disclosed, financial figures, personnel information, and anything classified as Confidential or Restricted — must never appear in any social media post or public digital communication. Statements that could reasonably be interpreted as representing the company's official position on any matter — commercial, technical, political, or regulatory — must not be made without prior written approval from the Communications team, regardless of the platform or the apparent informality of the context. Content that is defamatory, discriminatory, harassing, or that could constitute a privacy violation must not be published. When expressing personal professional views on topics connected to the company or its industry, employees must make clear that the views are personal and do not represent the company's position — a statement such as 'These views are my own' is the minimum expected disclosure.

Positive, substantive, and professional engagement on social media is actively encouraged. Employees who share industry insights thoughtfully, comment professionally on technical developments, acknowledge the achievements of colleagues on LinkedIn, contribute to professional communities, or publish technical content that reflects well on the company and the industry are adding professional value both for themselves and for the company. The social media provisions of this Code are designed to prevent harmful and irresponsible conduct, not to suppress legitimate professional expression. The company provides guidance and support through the Communications team for employees who want to build a professional profile and are uncertain about what they can and cannot share publicly.

10.3 Artificial Intelligence — Ethical Use Obligations

The rapid development and widespread adoption of generative artificial intelligence tools — systems capable of generating text, code, images, analysis, and other professional outputs from natural language prompts — has introduced a new and rapidly evolving set of ethical obligations that this Code addresses explicitly. Employees at {C['short']} who use AI tools in the course of their professional work do not thereby transfer the professional responsibility for the accuracy, quality, and appropriateness of the output they produce. The obligation to deliver work that is accurate, professionally competent, and consistent with the company's quality standards rests with the individual professional, regardless of the tools used to produce the work. An AI-generated deliverable that the employee has not reviewed, validated, and taken professional ownership of is not a professional deliverable — it is an AI output that happens to have been passed on.

The ethical framework for AI tool use at this company rests on the principle of AI-assisted rather than AI-substituted professional work. An employee who uses a generative AI tool to produce an initial draft, to explore alternative approaches to a problem, to check for issues in a piece of code, to summarise a long document, or to generate ideas for consideration — and who then applies their professional judgement to review, validate, improve, and take ownership of the result — is using AI as a productivity tool in a manner consistent with professional integrity. An employee who submits AI-generated work to a client or to management without meaningful review, who accepts AI-generated factual claims without verification, or who uses an AI tool to perform work that requires the exercise of professional judgement the tool is not capable of exercising, is compromising the quality and integrity of the professional service delivered.

The following specific AI ethics obligations apply to all employees. First, honesty about AI use: where the nature of the engagement, the client's expectations, or the context make it material that AI tools were used in the production of a deliverable, employees must be transparent about that use. The obligation to be transparent about AI use is contextual — it applies where transparency is materially relevant, not as a blanket requirement to disclose every use of autocomplete or grammar assistance. Second, verification before reliance: AI-generated factual claims, data, citations, code logic, and technical recommendations must be independently verified by the employee before being relied upon professionally. Generative AI systems produce plausible-sounding incorrect information with significant frequency, and the employee who submits such information without verification bears professional responsibility for its accuracy. Third, data security: no Confidential or Restricted data — including client information, proprietary source code, employee personal data, or any data classified above Internal Use Only — may be entered into an AI tool that processes data outside company-managed infrastructure, regardless of any privacy claims the tool makes about its data handling. The approved AI tools register maintained by IT Security specifies which tools are approved for use

with which classification levels.

AI Use Scenario	Conduct Obligation	Prohibited
Using generative AI to draft a client report	Review all AI-generated content for factual accuracy, appropriateness, and professional quality before use	Submitting AI-generated work product without adequate review
Using AI coding assistance (GitHub Copilot)	Review all suggested code for correctness, security, and compliance with coding standards	Committing AI-generated code without review
Using AI for research and data analysis	Verify all factual claims and data figures from AI sources against primary sources	Presenting AI-generated research as independently verified
Using AI tools for internal drafting	Label AI-assisted drafts clearly; do not submit AI-generated work as entirely human-produced	Misrepresenting AI-generated content as entirely human-produced
AI-generated content that may be inaccurate	Do not use AI tools to generate content that impersonates a real person	Creating AI-generated communications that impersonate another individual

10.4 Data Ethics and Algorithmic Fairness

Employees at Arjun Technologies who work with data — particularly data analytics professionals, machine learning engineers, and data scientists who build systems that make or inform decisions affecting individuals — carry specific ethical obligations related to the fairness, transparency, and accountability of those systems. A model that produces systematically biased outcomes affecting specific groups of people — even where the bias is unintentional and arises from patterns in historical training data rather than from deliberate discrimination — causes real and significant harm to the individuals affected. The fact that the harm is mediated by a machine learning system rather than a human decision-maker does not reduce its ethical significance.

The ethical obligations for employees working with data and machine learning systems include: testing models for disparate impact across demographic groups before deployment; documenting the training data, model architecture, and known limitations of any predictive system; not deploying a model that produces demonstrably biased outcomes affecting a protected group without documented senior management awareness of the bias and a plan to address it; being transparent with clients about the limitations and uncertainty of AI-driven recommendations; and raising concerns with management when a data product or analytical system appears to produce outcomes that a reasonable professional would consider unfair or harmful, even where those outcomes are not clearly illegal. The company's data ethics obligations go beyond legal minimum compliance to include a genuine commitment to building systems that are fair by design.

11. Political Activity, Public Statements, and External Roles

11.1 Political Activity — Personal and Institutional

Arjun Technologies is a non-partisan commercial organisation. It does not make donations to political parties or political campaigns, does not endorse political candidates or parties, and does not take institutional positions on contested political questions. These constraints exist not because the company is indifferent to civic life, but because taking institutional positions on political questions would compromise the company's ability to serve clients across the political spectrum and would expose the company to reputational and commercial risks that are inconsistent with its responsibilities to its shareholders, employees, and other stakeholders.

Employees have full and unqualified personal rights to hold political views, to participate in lawful political activity in their personal time and personal capacity, to vote in all elections for which they are eligible, and to engage in personal civic and advocacy activities on matters they care about. The company respects and supports these rights. The Code does not prohibit or discourage personal political participation. What it does require is that personal political activity is clearly conducted in a personal, not a company, capacity; that company resources — including working time, equipment, systems, facilities, and the company's name — are not used in connection with personal political activity; and that personal political views do not influence professional conduct in ways that are discriminatory, create a hostile environment for colleagues with different views, or compromise the quality of service provided to clients.

The obligation to separate personal political activity from the company's name and resources applies with particular force to employees at Band 5 and above, whose professional identity is more publicly associated with the company and whose statements may be attributed to the company whether or not they are intended to represent its position. Senior employees who plan to make public statements on politically sensitive topics — in speeches, published articles, media interviews, or social media posts — should consult the Communications team before doing so, to ensure that the statement cannot reasonably be read as representing the company's institutional position. A disclosure of personal opinion is typically sufficient — 'these views are entirely my own and do not represent the position of my employer' — but the precise approach should be discussed with Communications where the topic is particularly sensitive or where the employee has a significant public following.

11.2 Public Statements and Media Interactions

No employee is authorised to make statements to the media — print, broadcast, or online — about {C['short']}, its clients, its business, its financial performance, its strategy, its technology, or its people on the company's behalf, without prior written authorisation from the Communications team. This restriction applies regardless of the apparent informality of the media interaction, the seniority of the employee, or the positive nature of the intended

statement. A well-intentioned interview given without authorisation can result in the disclosure of material non-public information, create misleading impressions about the company's capabilities or plans, or make statements that contradict the company's official position in ways that create legal, regulatory, or commercial problems.

Where a media representative contacts an employee directly — by email, telephone, LinkedIn, or any other channel — seeking a comment, interview, or information about the company, the employee should respond only to acknowledge receipt, should not provide any information or comment beyond that acknowledgement, and should immediately forward the inquiry to the Communications team at communications@arjuntech.in. This applies equally to positive inquiries — requests for a company spokesperson for an industry feature, invitations to appear on a podcast about the company's technology — and to sensitive ones such as requests for comment on a client incident, a regulatory matter, or a personnel issue. The Communications team manages all media interactions to ensure consistency, accuracy, and appropriateness of response.

Conference presentations, webinar appearances, published articles, and thought leadership content — including technical blog posts that mention the company or its clients by name — are subject to a review and approval process managed by the Communications team. Employees who wish to publish or present content in a professional context that involves the company's name, clients, or work should submit the content to Communications for review at least ten working days before the intended publication or presentation date. Communications will review the content for confidentiality, accuracy, and appropriateness, provide any required approval, and may suggest revisions. This process is not designed to censor or suppress legitimate professional expression — it is designed to ensure that the company's external communication is consistent, accurate, and does not inadvertently cause harm to client relationships or the company's reputation.

11.3 External Roles — Charitable, Advisory, and Civic

Employees are encouraged to contribute to their professional communities, to charitable and civic organisations, and to the broader society through roles in their personal time that reflect the company's commitment to being a good corporate citizen. Volunteer work, charitable board service, professional association participation, mentoring activities, and civic engagement in personal time are positive and valued expressions of the company's ESG commitments and the individual values of its people. The company's paid volunteer leave provision — two days per year — is an expression of practical support for this kind of engagement.

External charitable and civic roles are subject to the same conflict of interest disclosure obligations that apply to commercial outside roles. If a charitable board on which an employee serves has a financial relationship with the company — as a recipient of CSR funding, for

example — or if the charity is associated with a client or potential client, the employee must disclose this relationship to HR using Form HR-012 and recuse themselves from any decisions affecting both organisations. The fact that a role is charitable or civic rather than commercial does not eliminate the potential for a conflict of interest where both organisations have a financial or operational relationship.

External advisory roles — serving on the advisory board of a startup, providing paid or unpaid strategic guidance to an early-stage company, or participating in investor or accelerator programmes as a mentor — require the same prior approval as any other form of outside employment or directorship. Advisory roles create potential conflicts of interest wherever the company being advised operates in the same space as this company or its clients, and they create the potential for the use of the company's confidential information or intellectual property in a context where the company has not authorised that use. Employees must apply for approval through the secondary employment process before accepting any advisory role, regardless of whether it carries any financial compensation.

11.4 Professional Associations and Industry Bodies

Active participation in professional associations, technical standards bodies, industry working groups, and peer communities is encouraged and valued at Arjun Technologies. These activities contribute to the professional development of the individuals involved, to the quality of the industry's technical standards, and to the company's external profile and relationships. Employees participating in such bodies in a capacity connected to their role at the company should inform their line manager and, where the participation involves a formal appointment or ongoing commitment, should document it in the annual conflict of interest register update.

Where participation in a professional association or standards body involves access to commercially sensitive information about other companies — competitor technology roadmaps shared in a standards context, for example, or client pricing information shared in an industry working group — the same confidentiality obligations that apply to client and company information apply to information shared within that professional body. Information shared in a professional association context is shared for the specific purpose of the association's work and must not be carried into the employee's commercial activities or shared with colleagues who are not participants in the relevant group. The obligation of confidentiality extends across professional communities in the same way it extends across client and employer relationships.

Segment 2 Summary and Continuation

This completes Segment 2 of the Arjun Technologies Code of Conduct. Segment 2 has covered the following sections in full: Section 7 — Confidentiality and Information Obligations, including client confidentiality, the practical handling standards by context, personal data obligations under the DPDP Act 2023, and the post-employment confidentiality provisions. Section 8 — Workplace Conduct and Professional Standards, including general professional standards, attendance and time integrity, use of company resources, intellectual property, and workplace safety and environmental conduct. Section 9 — Anti-Harassment, Discrimination, and Equal Opportunity, including the five-category prohibited conduct table, the POSH Act provisions and ICC procedures, and the equal opportunity and reasonable adjustment obligations. Section 10 — Digital Conduct, Social Media, and AI Ethics, including digital communication standards, the social media policy, the AI ethics framework with a five-scenario conduct table, and data ethics and algorithmic fairness obligations. Section 11 — Political Activity, Public Statements, and External Roles, including personal political activity, media interaction protocols, external charitable and advisory roles, and professional association participation.

Segment 3 completes the Code of Conduct with Section 12 (Environmental, Social, and Governance Responsibilities), Section 13 (Whistleblowing and Speaking Up — including anonymous reporting channels and anti-retaliation protections), Section 14 (Consequences of Code Violations — the complete disciplinary consequence framework), and the full appendices suite comprising the ethical decision-making framework (Appendix A), twelve common scenarios with detailed guidance (Appendix B), the Conflict of Interest Disclosure Form HR-012 (Appendix C), the Gift and Hospitality Register template (Appendix D), and the Code of Conduct Acknowledgement Form (Appendix E).

Segment	Content	Pages	Status
Segment 1	CEO Message · Purpose & Scope · Values · Integrity · Conflicts of Interest · Gifts & Anti-Corruption	1–40	Published — April 2024
Segment 2 — This document	Confidentiality · Workplace Conduct · Anti-Harassment · Digital Conduct & AI Ethics · Political Activity	41–80	Published — April 2024
Segment 3	ESG · Whistleblowing · Consequences · Appendices A–E	81–120	Published — April 2024

All three segments are available on the HRMS portal under Policies and Documents. For queries about any provision in this segment, contact hr@arjuntech.in. For concerns about potential violations, the Whistleblower hotline is available at ethics@arjuntech.in 24 hours a day, 7 days a week, with full anonymity available.

CODE OF CONDUCT

Segment 3 of 3 — ESG · Whistleblowing · Consequences · Appendices A–E

Version	2.4	**Effective Date**	01 April 2024
Review Date	31 March 2025	**Classification**	Internal Use Only
Approved By	Mr. Rajesh Arjun	**Document Owner**	Ms. Priya Menon
Legal Review	Mr. Sandeep Iyer	**Department**	Human Resources & Legal
Doc Ref.	HR-COC-001-v2.4	**Segment**	3 of 3 (Pages 81–120)

This final segment of the Arjun Technologies Pvt. Ltd. Code of Conduct covers Sections 12–14 (ESG Responsibilities, Whistleblowing and Speaking Up, and Consequences of Violations) plus the complete Appendices suite: the Ethical Decision-Making Framework (A), Twelve Common Scenarios with Guidance (B), the Conflict of Interest Disclosure Form (C), the Gift and Hospitality Register template (D), and the Code Acknowledgement Form (E). Queries: hr@arjuntech.in or ethics@arjuntech.in (anonymous, 24/7).

12. Environmental, Social, and Governance Responsibilities

12.1 Environmental Responsibilities

Arjun Technologies is committed to operating as a responsible business that actively manages and minimises the environmental impact of its activities. This commitment is formalised in the company's Environmental Policy, which addresses energy consumption across all five office locations, the environmental footprint of the cloud and data centre infrastructure the company uses in the delivery of its services, waste reduction and recycling practices, responsible procurement standards that consider the environmental credentials of suppliers, and travel minimisation through the default use of video conferencing for meetings that do not require physical co-location. The company reports on its environmental performance annually as part of its CSR disclosure under Section 135 of the Companies Act 2013 and its voluntary ESG reporting commitment.

Every employee has a personal role in supporting the company's environmental commitments through the choices made in daily professional activity. These individual choices, aggregated across more than four thousand employees, have a material collective impact on the company's environmental footprint. The expected environmental conduct standards for every employee include: powering down computers, monitors, printers, and other equipment fully at the end of the working day rather than leaving them in power-consuming standby states; using video conferencing tools as the default for meetings where the business purpose does not require the specific value of in-person presence, and reserving physical travel — particularly air travel — for situations where that value is genuine and cannot be replicated through digital means; printing only when a physical document is genuinely necessary rather than as a matter of habit or convenience, and using double-sided printing and recycled paper stock when printing is unavoidable; separating waste into the recycling and general waste streams provided at each office location according to the materials guidance displayed at each waste station; and following the company's e-waste disposal procedure for all electronic equipment, which requires that all laptops, phones, and other electronic devices are returned to the IT team for certified data destruction and environmentally responsible disposal rather than being placed in general waste.

Employees who identify opportunities to reduce the environmental impact of the company's operations — inefficient equipment, wasteful processes, unnecessarily travel-intensive practices, or missed recycling and energy efficiency opportunities — are encouraged to raise these through their line manager and the Facilities Management team. The company's sustainability programme actively seeks employee input and has implemented several significant improvements from employee-originated suggestions in recent years. Employees who raise environmental concerns or suggestions in good faith will always receive a substantive response from the relevant team.

12.2 Social Responsibilities — Community and CSR

Under Section 135 of the Companies Act 2013, Arjun Technologies allocates a minimum of two percent of its average net profits over the preceding three financial years to Corporate Social Responsibility activities. The company's current CSR focus areas reflect a considered assessment of where its specific capabilities and resources can have the greatest positive impact: digital literacy programmes for school-age children in rural Karnataka, Telangana, and Tamil Nadu, addressing the digital skills gap that limits the economic opportunities available to young people in underserved communities; accessible technology initiatives for persons with disabilities, using the company's technical expertise to design and deploy solutions that improve the independence and inclusion of people with visual, hearing, cognitive, and mobility impairments; and environmental conservation projects including urban tree-planting drives and watershed restoration work in regions affected by the company's operations.

Every employee is entitled to take two paid volunteer days per year to participate in CSR activities, either through company-organised programmes or through recognised not-for-profit organisations whose work aligns with the company's CSR focus areas. Information about current CSR initiatives, how to participate in company-organised volunteer activities, and how to register personal volunteering time for credit is available on the company intranet under Corporate Responsibility. The company actively encourages participation and tracks the aggregate volunteer hours contributed by employees each year as a measure of the depth of the company's community engagement beyond the financial CSR spend.

The most significant social contribution that every employee at Arjun Technologies makes, however, is not through the formal CSR programme — it is through the quality, integrity, and genuine usefulness of the professional work delivered every day. Technology that works reliably and is delivered honestly serves real people. A hospital's patient management system that functions correctly enables better healthcare. A financial services platform that is secure and accurately built protects its users' financial wellbeing. The quality and ethics of the company's core professional work is itself a form of social contribution that dwarfs the formal CSR budget in its scale and direct impact.

12.3 Governance Responsibilities

Good governance — the structures, processes, and accountability mechanisms through which organisations are directed and controlled — is the foundation on which ethical conduct is built and sustained. {C['short']}'s governance framework includes a Board of Directors providing independent oversight, an Audit Committee reviewing financial controls and compliance, a formal risk management process, external audit by an independent firm, and the suite of policies — including this Code of Conduct — that define the standards expected of every individual. Every employee contributes to the quality of the company's governance by meeting their

individual obligations: complying with policies, maintaining accurate records, disclosing conflicts, and speaking up when something appears wrong.

The governance obligations most directly relevant to employees in their daily work are: maintaining accurate and complete records in all systems they use; not bypassing or circumventing any internal control, approval process, or authorisation requirement — even where doing so would be more operationally convenient in the short term; disclosing information that is material to the company's risk or compliance position to the appropriate internal parties without delay; cooperating fully with internal and external audits, investigations, and regulatory reviews when requested; and never creating obstacles — through delay, incomplete disclosure, or misdirection — to any legitimate governance process.

Employees who are asked by a manager or senior colleague to take any action that would violate an internal control, bypass a required approval, falsify a record, or otherwise circumvent a governance requirement must refuse that instruction regardless of the seniority of the person giving it, must document the instruction and their refusal in writing, and must report the incident to the HR Business Partner and the Legal team. The fact that an instruction came from a person in authority does not make it appropriate to follow, and this Code explicitly protects employees who refuse inappropriate instructions and report them through proper channels.

13. Whistleblowing and Speaking Up

13.1 The Obligation and the Right to Speak Up

Creating an environment in which every employee feels genuinely safe and supported to raise concerns about potential violations of this Code, applicable law, or the company's policies — without fear of retaliation, marginalisation, or career damage — is one of the most important governance and ethical objectives of Arjun Technologies. The company recognises that many of the most significant organisational failures — in companies of all sizes and in all industries — occur not because no individual was aware that something was wrong, but because the individuals who were aware did not feel safe, supported, or obligated to say so. A speak-up culture is therefore both an ethical necessity and a practical risk management requirement: organisations that cultivate psychological safety for truth-telling identify and address problems earlier, at lower cost, with less reputational damage than organisations that suppress or discourage internal concern-raising.

Every individual covered by this Code has both the right and the obligation to report genuine concerns about ethical or legal violations. The right means that speaking up is fully protected — an employee who raises a concern in good faith will not be subjected to any form of adverse treatment as a consequence, and the company will actively investigate and address any retaliation that occurs. The obligation means that remaining silent about a known or strongly suspected serious violation is not a neutral act. An employee who observes conduct that they believe with reasonable grounds may constitute fraud, harassment, discrimination, a significant safety violation, a material data breach, or any other significant Code violation and who takes no action — out of reluctance to cause difficulty, out of concern about the personal consequences, or out of a hope that the situation will resolve itself — is failing to uphold the Accountability and Integrity values to which they have committed by accepting employment here.

The obligation to speak up does not require certainty that a violation has occurred. The standard is a genuine and reasonable belief that a violation may have occurred — that the facts available to the reporting individual, assessed honestly and without deliberate distortion, give reasonable grounds for concern. An employee who reports a concern that turns out on investigation to be unfounded — because the facts were different from what the reporter believed, or because the conduct did not actually violate any standard — is fully protected from any adverse consequence, provided they were acting honestly and in good faith. The protection is withdrawn only in cases of deliberately false reporting made with the specific intention of harming another individual rather than out of genuine ethical concern.

13.2 Reporting Channels

Multiple reporting channels are available to ensure that every covered individual can raise a concern through a channel that is appropriate to the nature of the concern and that feels safe

given their personal circumstances. No single channel is mandatory — the appropriate channel depends on the nature of the concern, the individuals involved, and the reporting employee's assessment of which channel provides the best combination of effectiveness, confidentiality, and personal safety.

Channel	Best Used When	How to Access	Anonymity	Response Time
Direct discussion with the manager	The concern does not involve the line manager; the employee is comfortable raising it directly	Request a meeting with the manager at any time	Not anonymous	Immediate to within 1 week
HR Business Partner	The concern involves the line manager, or previous informal discussion has not resolved the issue	Contact your assigned HR Business Partner directly by email or phone	Not anonymous	Within 5 business days
Formal Tier 2 Grievance	An informal discussion has not produced a satisfactory outcome, or the concern is serious enough to warrant a formal process	Submit a Grievance Form to HR	Not anonymous	Acknowledgement within 2 business days; resolution within 20 business days
Whistleblower Email	Concerns about senior management, or any concern where the employee prefers written communication	Email whistleblower@[company].com	Can be anonymous	Acknowledgement within 2 business days
Whistleblower Telephone Hotline	Urgent concerns requiring immediate attention, or where written communication is not preferred	1800 XXX XXX (toll-free, available 24 hours a day, 7 days a week)	Can be anonymous	Immediate acknowledgement; callback within 2 business days
Direct to General Counsel	Concerns of a specifically legal nature, or where the employee wishes to engage legal counsel directly	Email or phone the General Counsel directly	Not anonymous	Acknowledgement within 2 business days
Internal Complaints Committee (ICC)	Concerns specifically about sexual harassment, as defined by the POSH Act	Email ic@[company].com or contact the ICC Presiding Officer directly	Can be anonymous	Acknowledgement within 3 business days

13.3 Anti-Retaliation Protections

The protection against retaliation for good-faith reporting is absolute, comprehensive, and enforced with the same seriousness as the underlying violations that are reported. An employee who makes a good-faith report of a potential violation is protected from any form of adverse treatment that is connected — directly or indirectly — to the fact of that report. Retaliation is defined broadly and includes: formal adverse employment actions such as disciplinary proceedings, demotion, or termination connected to the report; informal adverse actions such as unfavourable work assignments, exclusion from meetings or opportunities, negative performance commentary, or unwarranted criticism; social ostracism or exclusion from the team community; intimidation, threats, or hostile conduct directed at the reporter; and any other treatment that a reasonable person would experience as punitive or harmful in connection with having made a report.

The anti-retaliation protection applies to the full scope of individuals involved in the reporting and investigation process — not only the person who first raises the concern. Witnesses who provide statements in an investigation, colleagues who support a complainant in navigating the reporting process, and HR and Legal team members who manage reporting and investigation processes are all protected from retaliation by any party affected by those processes. The protection applies regardless of the outcome of the investigation — an employee who is investigated and exonerated does not thereby acquire the right to take adverse action against the person who reported the concern in good faith.

When retaliation is identified — whether by the reporting employee, by a colleague, by HR, or through any other means — it is treated as a separate and independent Code violation, subject to its own investigation and its own disciplinary consequence. The disciplinary consequence for proven retaliation against a whistleblower is treated at the gross misconduct level — the most

serious category in the company's disciplinary framework — regardless of the scale or severity of the individual retaliatory act. This reflects the company's understanding that the entire speak-up culture depends on employees being able to observe, based on the actual experiences of colleagues who have reported concerns, that speaking up is genuinely safe. A single documented act of significant retaliation that goes unaddressed destroys that safety for every other employee in the organisation.

13.4 Handling Reports — Confidentiality and Process

Every report submitted through any of the channels described in Section 13.2 is treated with the highest level of confidentiality that the circumstances of the investigation permit. 'The highest level that circumstances permit' is an important qualification: it is not always possible to investigate a concern without the subject of the concern becoming aware that a concern has been raised about them, and it is not always possible to keep the reporter's identity completely confidential while also conducting a fair and effective investigation. The company's commitment is to protect confidentiality to the maximum extent possible in each specific case, to inform the reporter in advance if their identity must be disclosed as part of the investigation process, and to take all available protective measures when disclosure is unavoidable.

Anonymous reports submitted through the Whistleblower email or telephone hotline are investigated to the extent that the available information permits. The investigating team does not attempt to identify anonymous reporters, and the anonymity of a report does not reduce the seriousness with which it is treated. Where an anonymous report does not contain sufficient detail to conduct a meaningful investigation, the investigating team will document the report, note the limitations of the available information, and monitor for any additional information that might corroborate or develop the concern. The company encourages reporters who feel it is safe to do so to identify themselves, because identified reports typically allow for more thorough and effective investigations, but this is an encouragement, never a requirement.

All substantive reports — those that, if true, would constitute a material violation of this Code or of applicable law — are investigated by a designated investigator who has no conflict of interest with respect to any party to the concern. For concerns involving senior management, the investigation is conducted by an independent party external to the company's normal reporting structure, typically comprising external legal counsel and a Board-designated independent monitor. Investigation findings are reported to the CEO, the CFO, the Board Audit Committee, and the General Counsel as appropriate to the nature and severity of the finding. The reporter is informed of the outcome of the investigation to the extent that confidentiality permits, and is given an opportunity to raise any concerns about the investigation process through a separate, independent channel.

14. Consequences of Code Violations

14.1 Principles of the Disciplinary Process

The consequences for violations of this Code are determined by the nature and severity of the violation, the circumstances in which it occurred, the intent and awareness of the individual involved, the harm caused or plausibly risked by the violation, the individual's length of service and prior conduct record, and the presence or absence of genuine mitigating factors. {C['short']} applies the progressive discipline process described in the Employee Handbook for the majority of violations, working through informal coaching, verbal warning, written warning, and final written warning before reaching separation. However, certain categories of violation — those that fundamentally undermine the employment relationship, cause direct and significant harm, or demonstrate a deliberate and serious disregard for the standards in this Code — are treated as gross misconduct and may result in immediate termination following a fair investigation, without progression through the earlier stages of the disciplinary process.

The consistency of enforcement across levels of seniority is as important to the integrity of this Code as the severity of the consequences applied. An organisation that enforces its ethical standards rigorously for junior employees while providing informal warnings and second chances to senior individuals who commit equivalent violations does not have an ethical culture — it has a tiered accountability system that teaches every employee that the Code's standards apply differently depending on who you are. The company is committed to consistent enforcement, and the track record of how the Code has been applied to senior individuals in cases of material violations demonstrates that commitment in practice. Seniority may affect the complexity of the investigation required — senior matters typically involve more stakeholders and more careful procedural management — but it does not affect the standard of conduct expected or the range of consequences that may be applied.

14.2 Consequence Framework by Violation Category

Category	Definition and Examples	Investigation	Typical Consequence Range	Gross Misco
Minor Misconduct	A first-time, isolated, low-impact			
Moderate Misconduct	A repeated pattern of minor			
Serious Misconduct	A significant single violation or a			
Gross Misconduct	Conduct so serious that it fund			
Retaliation Against	Any			

14.3 The Investigation and Fair Process Guarantee

No disciplinary consequence of any kind will be applied to any individual covered by this Code without a fair investigation in which the person concerned has been informed of the specific allegation against them, has been given a genuine and adequate opportunity to provide their

account and any supporting evidence or witnesses, and has received a written determination setting out the findings and the rationale for any consequence applied. This fair process guarantee applies regardless of the seniority of the person, the nature of the allegation, or the apparent strength of the evidence at the outset. The company does not take any formal disciplinary action on the basis of an allegation alone — an allegation is a starting point for investigation, not a determination of fact.

The investigation process applies the following procedural standards in all formal disciplinary matters. The investigation is conducted by a designated investigator who has no conflict of interest with respect to any party to the matter. The subject of the investigation is informed of the allegation in sufficient detail to prepare a meaningful response — which means more detail than 'there have been concerns raised about your conduct' and less than a forensic disclosure of all investigation materials before the investigation is complete. The subject is given a reasonable opportunity to respond in writing and in person, to present supporting evidence, and to suggest witnesses whose evidence may be relevant to their account of events. The subject has the right to be accompanied by a colleague of their choice at any formal disciplinary meeting. The investigation findings are documented in a written report and the outcome — including the reasons for any consequence applied — is communicated to the subject in writing.

Every individual who receives a formal disciplinary consequence has the right to appeal that decision through the appeal process described in the Employee Handbook. The appeal is considered by a different decision-maker of at least equivalent seniority to the original decision-maker, who reviews both the fairness of the process followed and the appropriateness of the consequence applied in light of the full investigation record. An appeal does not automatically suspend the consequence applied pending its outcome — for serious consequences including termination, the employee may seek an interim remedy through the applicable legal or conciliation framework if they wish to contest the consequence while the appeal is ongoing.

14.4 Mitigating and Aggravating Factors

The assessment of the appropriate consequence for a Code violation takes into account a range of mitigating and aggravating factors that can move the outcome toward the more or less serious end of the applicable range. These factors do not override the requirement for a fair process or change the categorisation of the violation — they operate within the range of consequences applicable to that category.

Factor Type	Examples	Effect on Consequence
Mitigating factors	Voluntary self-reporting before the violation is discovered independently; genuine remorse and acknowledgement	May reduce the consequence within the applicable range, or
Aggravating factors	Deliberate concealment of the violation after it occurred; attempting to pressure others to participate	May increase the consequence within the applicable range, or
Seniority — effect on standard	The individual holds a management or leadership position with responsibility for others' conduct	Seniority increases the standard of conduct expected, not decre

Appendix A: Ethical Decision-Making Framework — Expanded Guidance

This appendix provides expanded practical guidance on applying the four-question framework introduced in Section 3.2 to the categories of situation most commonly encountered by employees at this company. The framework is not a substitute for professional judgement — it is a structured aid for exercising that judgement more consistently and with greater awareness of the ethical dimensions of the decision. Where the framework leads to a clear answer, follow it. Where it leads to continued uncertainty, seek advice from HR or Legal before acting.

Question	Applying It in Practice	When the Answer Is Unclear
Q1: Is it LEGAL?	Consider all applicable legal frameworks — not only the law in the country where you are working, but any laws that may apply to the specific situation because of the nature of the business or the parties involved.	Consult the Legal team before taking any action. The cost of a short delay is almost always less than the cost of a legal dispute.
Q2: Is it consistent with the Code and our policies?	Identify which sections of this Code and which specific policies are relevant to the situation. Read them. Do not rely on your memory of what they say.	Contact the HR Business Partner for the relevant policy area. Ambiguity in a policy is itself a reason to seek clarification before proceeding.
Q3: Would I be comfortable if my actions were known publicly?	Apply the test honestly. The question is not whether you think you can justify the action to yourself, but whether you would be able to explain it to a colleague, a regulator, or a journalist without discomfort.	If you find yourself unable to answer this question honestly, that discomfort is information. Do not proceed until you understand what is causing it.
Q4: Is it right?	Step back from the specific rules and ask the broader question: does this action align with the kind of person, and the kind of company, we want to be?	Discuss the situation with a trusted colleague, a mentor, or the Ethics Committee. Articulating the dilemma to someone else often clarifies the right answer.

Appendix B: Common Scenarios and Guidance

The following twelve scenarios represent situations that employees at this company have found difficult to navigate. For each scenario, the guidance reflects the application of this Code and the company's specific policies to the facts described. The scenarios are illustrative — real situations are almost always more complex than a brief description can capture, and employees are always encouraged to seek HR or Legal guidance when facing a genuinely difficult situation rather than relying solely on the closest available scenario.

Scenario 1 — The overconfident capability claim in a proposal

Situation: A sales team is preparing a proposal for a major financial services client requiring significant machine learning expertise. The team has some ML capability but not the depth the project requires. The account manager proposes describing the capability as 'extensive' to win the contract, planning to hire the necessary expertise once the contract is secured.

Guidance: Describe the company's actual current capability accurately and present a specific, credible plan for how the required additional expertise will be sourced or developed — whether through targeted hiring, a sub-contractor arrangement with a named partner, or an accelerated internal training programme. A proposal that accurately represents current capability with a credible development plan is more trustworthy than one that overstates current capability and is found wanting in delivery. If the contract is lost to a competitor who overstated their own capability, that is the competitor's ethical failure, not the company's opportunity. The account manager should raise this situation with the relevant SVP Sales and the Legal team rather than making a unilateral decision to misrepresent capability.

Scenario 2 — The client data overheard in public

Situation: An employee is working from a coffee shop and takes a client call to discuss a client's security vulnerabilities and the remediation plan the company is implementing. Other coffee shop patrons are within earshot.

Guidance: The employee should have recognised before taking the call that the subject matter — client security vulnerabilities — is specifically Confidential under the information classification scheme, and that a coffee shop is not an appropriate environment for a Confidential discussion. The correct action at the point the employee realises the call is going to cover sensitive material is to ask the client to reschedule the call or to immediately move to a private space. The hybrid working policy and the confidentiality provisions of this Code both require that Confidential discussions are conducted in environments that protect against inadvertent disclosure. This scenario illustrates that the confidentiality obligation is not merely about not deliberately disclosing information — it is about taking positive steps to prevent inadvertent disclosure.

Scenario 3 — The manager who pressures timesheet adjustments

Situation: A manager tells a team member to record project hours against Client A's account rather than Client B's, where the work was actually performed, because Client B's budget is nearly exhausted and the manager does not want to have the conversation with the client about the budget overrun.

Guidance: The employee must refuse this instruction. Deliberately recording hours against a client account that does not correspond to where the work was performed is falsification of a financial record — it directly affects client billing accuracy and the integrity of the company's financial accounts. The employee should document the instruction in writing, inform the manager that they cannot comply with the request, and escalate the matter to the HR Business Partner and Finance. This is precisely the situation for which the Whistleblower hotline exists if the employee does not feel safe raising it through normal channels.

Scenario 4 — The gift above threshold during a procurement

Situation: An employee involved in evaluating three vendors for a significant IT infrastructure contract receives an invitation to a corporate hospitality event at a major cricket match from one of the vendors under evaluation. The face value of the invitation is approximately ■12,000 per person.

Guidance: The employee must decline the invitation immediately and without ambiguity. The value of the hospitality substantially exceeds the threshold at which manager approval would be required (■8,000 per person), but more importantly, the timing — during an active vendor evaluation in which the host company is a candidate — makes the invitation prohibited in all circumstances regardless of value. Accepting the invitation would create both an actual and apparent conflict of interest in the evaluation process, would violate the anti-corruption provisions of this Code, and would be documented in the Gift Register if accepted — where it would be reviewed by the General Counsel and the Audit Committee. The employee should decline politely in writing, should record the invitation in the Gift Register even though it was declined, and should notify the procurement lead of the approach.

Scenario 5 — The colleague's discriminatory hiring comment

Situation: During a debrief after a panel interview for a senior engineering role, a senior colleague comments that the committee should not select Candidate X because 'clients won't take someone with that accent seriously' — implicitly discriminating on the basis of national origin.

Guidance: The comment describes a discriminatory hiring rationale and must be challenged immediately, not absorbed into the hiring decision-making process. The correct response in the moment is to state clearly that a candidate's accent is not a valid criterion in the evaluation and should not be part of the discussion. After the meeting, the incident should be reported to the HR Business Partner, who will determine the appropriate follow-up action — which may include a coaching conversation with the colleague, a review of the hiring decision to ensure it was not influenced by the discriminatory comment, and notation in the colleague's HR record. Allowing the discriminatory rationale to influence the final hiring decision, even where other non-discriminatory factors also support the same outcome, creates legal and ethical risk that cannot be retrospectively resolved.

Scenario 6 — The performance review inflation request

Situation: A manager is completing performance assessments and is considering rating all of their team members at Rating 4 (Exceeds Expectations) or Rating 5 (Exceptional), regardless of actual individual performance, because they want to protect their team's morale and compensation outcomes ahead of a period of high project pressure.

Guidance: This is a form of record falsification applied to HR records and a violation of the Accuracy of Records provisions in Section 4.2. Performance ratings that do not reflect actual performance also undermine the fairness of the merit distribution process for all other employees who receive accurate ratings, because they distort the calibration exercise and potentially consume merit budget that should be available for genuinely high performers. Calibration exists precisely to catch this pattern. The manager should apply the performance ratings that the evidence supports honestly and should raise concerns about team morale and retention through the appropriate channels — the HRBP and the relevant SVP — where those concerns are genuine and legitimate.

Scenario 7 — The AI-assisted proposal submitted as entirely human work

Situation: An employee uses a generative AI tool to produce approximately 80% of the substantive content in a client proposal — including the technical approach, the team capability description, and the financial model narrative — makes minimal edits, and submits it to the client without any review beyond checking for obvious formatting issues.

Guidance: The employee has failed to meet the professional quality obligations of this Code in two specific ways. First, they have submitted a client deliverable without adequate professional review of its accuracy, appropriateness, or quality — the AI tool may have produced plausible-sounding but factually incorrect, technically flawed, or commercially inappropriate content that the employee would have identified with a proper review. Second, where the client's expectations or the nature of the engagement make the use of AI tools material — which is typically the case for a substantial portion of a strategic technical proposal — the employee has been less than fully transparent about the methodology used to produce the work. The obligation is not to avoid using AI tools; it is to use them as aids to professional judgement rather than substitutes for it.

Scenario 8 — The confidential client comparison

Situation: During a business development meeting with Prospect B, an account executive mentions specific details about the architecture and cost of the solution the company delivered for Client A — a direct competitor of Prospect B — to demonstrate the company's relevant experience, without Client A's knowledge or consent.

Guidance: This is a direct breach of client confidentiality. Client A's architecture, cost structure, and solution details are specifically Confidential information. Disclosing them to a third party — even a prospective client, even without naming Client A — without Client A's explicit written consent is a violation of both this Code and the company's contractual confidentiality obligations to Client A. The account executive should have sought Communications team guidance before the meeting on what client experience may be shared and in what form. Case study material must be approved by the relevant client before any details are included in external presentations. If the meeting has already occurred and Client A's information was disclosed, Legal must be notified immediately.

Scenario 9 — The whistleblower's colleague excluded after reporting

Situation: A team member raises a concern through the Whistleblower hotline about a potential procurement irregularity involving their manager. Over the following two weeks, the manager stops inviting that team member to key project meetings and excludes them from a high-profile client visit that other team members attend.

Guidance: This is retaliation and must be reported immediately to the HR Business Partner or the VP-HR, bypassing the line manager entirely given their involvement. The change in the team member's inclusion in meetings and opportunities — occurring in the two weeks following the report and applying specifically to this team member — constitutes exactly the pattern of retaliation this Code prohibits. The matter will be investigated as gross misconduct independently of the original procurement concern. The manager's awareness that retaliation is prohibited will be considered in the assessment of whether the exclusions were deliberate acts of retaliation or coincidental changes in working arrangements — but the pattern described, if accurate, would be treated as retaliation absent a very compelling alternative explanation.

Scenario 10 — The late-night message to a junior colleague

Situation: A senior team lead sends a series of increasingly terse and critical messages to a junior team member at 11pm about work submitted that afternoon, ending with 'I honestly don't understand how someone who claims to be a senior associate can produce something this poor.'

Guidance: This communication fails the professional standards test in two distinct ways. First, the timing — 11pm — creates an implicit pressure on the junior employee to respond outside normal working hours and contributes to an always-on culture that this company's hybrid working policies are designed to resist. Second, and more seriously, the language of the final message — 'I honestly don't understand how someone who claims to be a senior associate...' — is personally demeaning rather than professionally substantive. It attacks the individual's professional identity rather than addressing the specific quality issues with the work. This style of communication, if directed repeatedly at the same person, constitutes bullying. As a single incident it is a conduct concern requiring a coaching conversation. The junior team member is entitled to raise this with the HR Business Partner. The senior team lead should reflect on both the timing and the language of the communication and whether it reflects the professional standards they would want to see applied to them.

Scenario 11 — The vendor with a known compliance problem

Situation: During vendor due diligence for a new technology partnership, an employee discovers that the proposed vendor was investigated two years ago for suspected facilitation payments to government officials in another jurisdiction. The investigation was inconclusive. The vendor is otherwise the most capable option available and the partnership is commercially important.

Guidance: This is a significant red flag that must be escalated to the Legal team and the relevant SVP immediately, not managed at the individual employee's level. An inconclusive investigation into suspected facilitation payments does not clear the vendor — it establishes that concerns were serious enough to warrant a formal investigation without producing sufficient evidence for a prosecution, which may reflect on the quality of the investigation as much as on the vendor's innocence. The company's anti-corruption due diligence provisions require that third-party partners meet appropriate ethical standards. Legal will assess whether the historical concern, combined with the outcome of the current due diligence, provides sufficient comfort to proceed, and will recommend appropriate additional contractual protections or enhanced monitoring if the partnership does proceed.

Scenario 12 — The end-of-year expense claim padding

Situation: An employee realises in late March that they have not submitted expenses for several legitimate business costs incurred earlier in the year. They also include in the year-end claim three personal restaurant receipts from the same period, on the basis that they cannot now remember whether the dinners were business-related or personal.

Guidance: The three restaurant receipts whose business purpose the employee cannot confirm as business-related must not be included in the expense claim. An expense claim requires the employee to certify that the expenses were legitimately incurred for business purposes. Claiming expenses whose business purpose the employee genuinely cannot confirm — let alone expenses that the employee suspects may have been personal — is a misrepresentation of the claim. The correct approach is to submit the expenses whose business purpose can be confirmed and to absorb personally any costs that cannot be. The financial value of the three personal receipts is irrelevant to the ethical analysis: the act of submitting them as business expenses knowing they may not be business expenses is dishonest regardless of the amount.

Appendix C: Conflict of Interest Disclosure Form (HR-012)

Complete and submit this form to the HR Business Partner or to hr@arjuntech.in whenever an actual, potential, or apparent conflict of interest arises. Also available on the HRMS portal under HR Services. Submission is a demonstration of the Integrity value — not an admission of wrongdoing. HR acknowledges receipt within 2 working days and provides a written determination within 5 working days. All disclosures are confidential.

Appendix E: Code of Conduct Acknowledgement Form

By signing below, I confirm that I have received all three segments of the Arjun Technologies Pvt. Ltd. Code of Conduct, Version 2.4, effective 01 April 2024. I confirm that I have read and understood the full document. I agree to conduct myself in accordance with every standard and obligation described in this Code and in the supporting policies referenced within it. I understand that compliance is a condition of my employment or engagement and that violations may result in disciplinary action up to and including immediate termination.

CODE OF CONDUCT

Segment 4 of 4 — Client Ethics · Supplier Ethics · Insider Trading · Mental Health · Responsible Leadership · Ethics Programme

Version	2.4	**Effective Date**	01 April 2024
Review Date	31 March 2025	**Classification**	Internal Use Only
Approved By	Mr. Rajesh Arjun	**Document Owner**	Ms. Priya Menon
Legal Review	Mr. Sandeep Iyer	**Department**	Human Resources & Legal
Doc Ref.	HR-COC-001-v2.4	**Segment**	4 of 4 (Pages 121–160)

This final segment of the Arjun Technologies Pvt. Ltd. Code of Conduct extends the Code with six additional sections: Client Relationship Ethics, Supplier and Procurement Ethics, Insider Trading and Securities Law, Employee Wellbeing and Mental Health, Responsible Leadership, and the Ethics Programme overview. It also includes Appendices F through J: the Ethics Self-Assessment Tool, the Manager Ethics Checklist, the Annual Ethics Certification Form, the Ethics Programme Calendar, and the complete Cross-Reference Index to all company policies. Queries: hr@arjuntech.in or ethics@arjuntech.in (24/7, anonymous).

15. Client Relationship Ethics

15.1 The Ethical Foundation of Client Relationships

Every client relationship at Arjun Technologies is built on a foundation of professional trust — the client's belief that the company will deliver what it promises, handle the client's information with discretion, act in the client's genuine interests, and behave with transparency and integrity in every commercial and professional interaction. This trust is the company's most commercially valuable asset, and it is created and maintained entirely through the conduct of the individuals who represent the company in every client interaction. A single employee who misleads a client, mishandles client data, or prioritises short-term commercial advantage over the client's genuine interests can destroy years of earned trust — in that client relationship and, through the reputational effect of a significant breach, in the broader market for the company's services.

The ethical obligations governing client relationships at this company go beyond the contractual obligations documented in the client service agreement. The contract defines the minimum — the specific deliverables, timelines, quality standards, and commercial terms that must be met as a matter of legal obligation. The ethical obligations in this Code define the standard above the contractual minimum — the standard of conduct that the company commits to because it reflects the kind of organisation it has chosen to be, not merely because it is legally required. An employee who meets contractual obligations but falls below the ethical standard — who delivers technically compliant work through methods the client has not authorised, who withholds information the client would consider material, or who uses a client relationship for purposes beyond the scope of the engagement — is in violation of this Code regardless of contractual compliance.

The primary ethical obligations in client relationships are as follows. First, the obligation of competence: the company must deploy professionals with the skills and experience appropriate to the work assigned to them, and must be transparent with clients about the composition and capability of the team actually performing the work, not merely the team presented in the proposal. Second, the obligation of transparency: clients must be informed promptly and honestly of any material development — a risk that has materialised, a deadline that will be missed, a dependency that has not been met, a vulnerability that has been discovered — that affects the client's ability to make informed decisions about the engagement. Third, the obligation of confidentiality: all client information is treated as described in Section 7 and never used for any purpose other than the delivery of the contracted services. Fourth, the obligation of fair dealing: the company does not exploit superior technical knowledge, information asymmetries, or contractual ambiguities to extract value from clients at the expense of the client's legitimate interests.

15.2 Scope Changes, Billing, and Commercial Transparency

The management of project scope and client billing is one of the most ethically sensitive dimensions of client relationship management at a technology services firm. Scope creep — the gradual expansion of a project's work beyond the boundaries of the original agreement — is a constant feature of complex technology engagements, and the ethical obligations governing how it is managed are clear. Work that falls outside the contracted scope must be agreed with the client in writing before it is performed and billed; the company does not perform out-of-scope work and present the client with a bill for it after the fact. Where work is performed at the company's initiative — to address a quality issue the company created, to correct an error in the company's own deliverable, or to meet a contractual standard that was not initially achieved — that work is not billable to the client regardless of the time and cost involved.

Time and materials billing — where the client pays based on the hours recorded by the company's personnel against their project — creates a specific ethical obligation around timesheet accuracy that goes beyond the general record integrity requirement in Section 4.2. In a T&M; context, an inaccurate timesheet is not merely an internal record integrity issue — it directly and immediately results in the client being charged incorrectly for services. Over-reporting of hours on a T&M; project — recording more hours than were actually worked, or allocating time from another activity to the client's account — is a form of fraud against the client. Even where the over-reporting is accidental rather than deliberate, the obligation to correct it promptly on discovery and to notify the client of the correction applies immediately.

Fixed-price engagements create a different but equally important set of ethical obligations. On a fixed-price basis, the company has committed to deliver a defined outcome for a defined price, and the company carries the financial risk of delivering that outcome within the agreed cost. Attempting to reduce the actual cost of delivery by providing less than what was agreed — fewer skilled resources, lower quality materials, reduced scope within a technically compliant interpretation of the contract — without the client's knowledge or consent is a breach of the client's reasonable commercial expectations and of the Integrity standard in this Code, even where it may be technically defensible under the letter of the contract.

Client Billing Situation	Ethical Obligation	What Is Prohibited
T&M project — hours will exceed budget	Notify the client proactively, in writing, at a defined threshold (typically 80% of budget) before reaching	Continuing to bill hours against a project budget without alerting
T&M project — error discovered in timesheet	Correct the timesheet immediately, regardless of the direction of the error (over- or under-statement)	Allowing an incorrect timesheet to stand; failing to notify the client
Fixed-price project — scope ambiguity	Raise and agree any change in writing before performing the work	Performing out-of-scope work and billing for it under the fixed price
Fixed-price project — cost overrun	Absorb cost overruns that arise from the company's own planning failures, estimation errors, or quality issues	Passing these costs to the client through change orders or invoices
Any project — out-of-scope work identified	Obtain written client approval for any out-of-scope work before it is performed	Performing out-of-scope work and billing for it without client approval

15.3 Managing Declining Client Relationships

The ethical obligations in client relationships apply with particular force during periods of difficulty — when a project is failing, when a client is unhappy, or when the company is facing a

decision about whether to continue a relationship that is no longer commercially viable or professionally appropriate. The temptation during these periods is to prioritise the commercial or reputational short term — to obscure problems, to manage perceptions rather than realities, to delay difficult conversations, or to extract maximum commercial value from a relationship that is ending. Each of these responses violates the ethical standards in this Code and, in the medium term, causes greater commercial and reputational damage than honest management of the difficult situation would have.

Where a client relationship is ending — whether by the client's choice, the company's decision, or mutual agreement — the ethical obligations in the transition period are: completing or orderly handing over all in-progress work to a standard that enables the client to continue operations without interruption; providing all documentation, source code, data, and other deliverables owed to the client under the contract, promptly and completely; not using the leverage of transition risk to extract commercial concessions from a client who is dependent on the company's cooperation for an orderly handover; and maintaining client confidentiality in relation to the exiting relationship with the same rigour as during the active engagement.

The decision to exit a client relationship — where the company initiates the exit — must be made transparently and with adequate notice to enable the client to make alternative arrangements. Where the decision to exit is based on ethical concerns about the client's conduct — requests to participate in conduct that would violate this Code, instructions to misrepresent work to the client's own stakeholders, or requests to handle data in ways that would violate the DPDP Act or applicable privacy obligations — those concerns must be documented and escalated to the Legal team and the relevant SVP before the exit decision is implemented, to ensure that any legal obligations arising from the client's conduct are properly managed.

16. Supplier and Procurement Ethics

16.1 Fair and Transparent Procurement

The company spends substantial sums each year on technology, infrastructure, professional services, facilities, and other goods and services from external suppliers. The integrity of the procurement process through which those suppliers are selected and managed is a significant ethical and governance obligation. Procurement decisions must be made on the basis of defined, documented, and objectively applied criteria — quality, capability, price, service level, financial stability, and the supplier's own ethical standards — not on the basis of personal relationships, informal preferences, or any consideration that would constitute a conflict of interest under Section 5.

The specific ethical obligations that apply to everyone involved in a procurement process — whether as an approver, an evaluator, a technical reviewer, or a commercial negotiator — are as follows. First, all actual, potential, or apparent conflicts of interest must be disclosed and managed before participation in the evaluation begins, not after the preferred vendor has already been identified. Second, commercially sensitive information about one vendor's proposal — pricing, technical approach, contract terms — must not be shared with any other vendor for the purpose of enabling that vendor to sharpen their own proposal. Third, the evaluation must apply the published criteria consistently to all vendors rather than applying different standards to different vendors to rationalise a predetermined outcome. Fourth, the final selection decision must be documented in the procurement record with the specific evidential basis for the choice, so that it is auditable and any subsequent challenge to the outcome can be properly assessed.

The company's procurement policy requires that all purchases above defined thresholds go through a formal competitive tender process with a minimum of three qualified vendors. Purchases below these thresholds may use a simplified process but remain subject to the same ethical standards. Emergency procurement — where the urgency of the requirement makes a full competitive process impractical — is permitted with specific SVP and Finance approval, but the emergency justification must be genuinely documented. Using 'emergency' status to bypass competitive procurement for non-emergency requirements — for example, to favour a preferred vendor who would not win on merit in a competitive process — is a misuse of the emergency procurement pathway and a violation of this Code.

Purchase Category	Approval Authority	Minimum Vendors	Documentation Required	Ethics Check
Below ■50,000	Line manager	1 quote	Standard purchase order	Conflict of interest — verbal confirmation to m
■50,000 – ■5,00,000	Line manager + Finance	2 quotes	Comparative quote summary	Conflict of interest disclosure form if any relat
■5,00,000 – ■50,00,000	SVP + Finance + Legal review	3 competitive quotes	Formal evaluation scorecard + recommendation	Conflict of interest form + HRBP review of ev
Above ■50,00,000	CFO + CEO + Board (for major contracts)	Full tender process	Complete tender documentation + CFO process evaluation report	Ethics Committee review + Audit

Purchase Category	Approval Authority	Minimum Vendors	Documentation Required	Ethics Check
Strategic partnerships and JVs	Board	Full tender or negotiated with Board approval	Extended due diligence + Board paper	Legal review + COI review + external counsel er

16.2 Supplier Relationship Standards

The ethical standards that govern Arjun Technologies's relationship with its clients apply with equal force to its relationship with its suppliers and vendors. Suppliers must be treated with honesty, fairness, and respect — they are professional partners whose services the company depends on, not adversaries to be defeated in negotiation. The company's commercial interests are best served by supplier relationships that are stable, mutually beneficial, and built on realistic expectations and honest communication. Extracting maximum short-term commercial advantage from suppliers through misleading representations, payment delays without legitimate dispute, or exploitation of a dominant bargaining position is not consistent with the company's values even where it might be commercially feasible.

The specific conduct standards that apply to all employees who manage supplier relationships include: paying approved invoices within the contractually agreed payment terms and raising any legitimate disputes promptly and in good faith rather than using payment delays as a commercial lever; not misleading suppliers about the company's requirements, timelines, or budget to obtain more favourable commercial terms; not engaging a supplier's resources on a speculative basis — requesting detailed proposals, engaging in extended due diligence, or involving suppliers in proof-of-concept work — without a genuine intention to award business if the supplier performs well; not sharing a supplier's proprietary methodologies, pricing structures, or technical approaches with competing suppliers without the supplier's consent; and maintaining confidentiality of all information shared by suppliers in the context of a commercial relationship or tender process.

Suppliers are expected to meet the ethical and legal standards that this Code establishes for the company's own employees in all matters connected to the company's business. The company's standard vendor contracts include provisions requiring compliance with applicable anti-corruption law, employment and human rights standards, data protection obligations, and the company's anti-bribery policy. Suppliers who are found to have violated these standards in connection with the company's business — whether through labour violations, corrupt payments on the company's behalf, data breaches affecting the company's data, or any other significant ethical breach — will have their engagement reviewed by Legal and the relevant SVP, and may have their contract terminated where the breach is sufficiently serious.

17. Insider Trading and Securities Law Compliance

17.1 What Constitutes Inside Information

In the course of their professional activities at Arjun Technologies, employees may from time to time receive or become aware of information about publicly listed companies — including clients, suppliers, joint venture partners, and in some circumstances the company itself if it were to pursue a public listing — that is material and has not been disclosed to the public. Such information is typically referred to as inside information, unpublished price-sensitive information (UPSI), or material non-public information (MNPI). Trading in the securities of a company while in possession of inside information about that company — or tipping off others to trade on such information — is a serious criminal offence under the Securities and Exchange Board of India (Prohibition of Insider Trading) Regulations 2015, as amended, and under securities laws in most other major jurisdictions. The consequences include criminal prosecution, civil penalties, disgorgement of profits, and career-ending reputational damage.

Inside information is any specific information relating to a listed company that: is not generally available to the public; is likely to materially affect the price of the company's securities if it were made public; and relates to the listed company, its management, its business, or its financial position. Common examples of inside information that employees at a technology services company might encounter include: a client's unreleased financial results; a client's planned merger, acquisition, or major restructuring; a client's discovery of a major security breach or other material adverse event; a client's planned significant contract win or loss; and technical information about a client's product that, if known to the market, would materially affect the market's assessment of the client's competitive position.

The test for whether information is 'material' — whether it would likely affect the price of securities if disclosed — is not precise and should be applied conservatively. Where an employee is uncertain whether information they have received through their professional activities would, if it were to become public, move the price of the relevant company's securities, they should treat it as inside information and seek Legal guidance before making any securities transaction. The cost of delaying a transaction while seeking Legal guidance is trivial; the cost of trading on inside information and being prosecuted under the SEBI insider trading regulations is severe and permanent.

17.2 Employee Obligations Under Securities Law

The obligations of employees at this company in relation to inside information and securities trading are: not trading in the securities of any listed company while in possession of material non-public information about that company obtained through professional activities; not communicating inside information to any other person — including family members, friends, or professional contacts — who might use it to trade; disclosing to the Legal team immediately

upon receipt any information that the employee believes may constitute inside information about a listed company; complying with any trading blackout or pre-clearance requirement imposed by the Legal team in connection with a specific client engagement or corporate transaction; and maintaining a contemporaneous record of when they first received inside information and what steps they took to manage it.

The company will impose trading restrictions — formally called trading blackout periods — on employees who have access to inside information about specific listed companies in the course of their professional activities. The Legal team identifies situations that require trading blackout periods and communicates the restriction directly to the affected employees. A blackout period means that the affected employee may not buy, sell, or otherwise deal in the securities of the specified company during the blackout period. Scheduled investment programme transactions — such as systematic investment plan contributions to mutual funds — are typically excluded from blackout restrictions, but employees should confirm the position with Legal before proceeding with any investment transaction during a blackout period.

Situation	Employee Obligation	Who to Contact	Timeline
Employee receives client financial results before public announcement	Do not trade in the client's securities	Legal team	Notify Legal within 24 hours of receiving the i
Employee hears client discussing a potential acquisition	Treat as material non-public information	Legal team	Notify Legal within 24 hours
Employee is placed on a trading blackout list	Do not trade in the specified securities	Legal team	Confirm receipt and acknowledge the restriction
Employee's family member asks about a client they work with	Do not share any material non-public information	Legal team	Seek guidance before responding
Employee wants to trade in securities of a company they cover	Seek pre-clearance from Legal	Legal team	Allow at least 2 working days before the intended trad

18. Employee Wellbeing and Mental Health

18.1 The Company's Commitment to Employee Wellbeing

The wellbeing of every employee — physical, mental, and emotional — is a genuine and active commitment of {C['short']}, not merely a statement in a policy document. This commitment is expressed in the structural provisions of the company's employment conditions — the working hours policy, the leave entitlements, the EAP programme, the hybrid working model — and in the cultural standards described in this section. An organisation that demands high professional standards and long-term committed performance from its people has a corresponding obligation to create conditions in which people can sustain that standard without causing lasting harm to themselves. Performance excellence and employee wellbeing are not in tension — chronic overwork, sustained stress without support, and cultures where raising personal difficulties feels unsafe all degrade the quality and sustainability of professional performance over time.

The ethical obligations in this section apply primarily to managers — who have the greatest influence over the conditions in which their team members work — but also to every employee in terms of the treatment of colleagues and the culture they help create. A culture where discussing personal or mental health difficulties feels professionally risky, where working during leave or late into every evening is implicitly expected and rewarded, where burnout is treated as a sign of dedication rather than a warning signal, and where asking for help is seen as weakness rather than sound self-management — is an unhealthy culture regardless of its short-term productivity metrics. The company does not want to build such a culture, and leaders who create it are not meeting the standards this Code sets for responsible professional leadership.

The Employee Assistance Programme provides every employee and their immediate family members with access to up to six free, confidential counselling and advisory sessions per year, covering mental health, workplace stress, personal difficulties, financial concerns, and legal queries. The programme is entirely confidential — the company has no visibility into individual usage, and accessing the EAP has no effect on an employee's HR record, performance assessment, or career prospects. The EAP is accessible at eap.arjuntech.in, through the company intranet, and through a 24-hour telephone helpline. Employees who are experiencing stress, anxiety, burnout, or any other mental health difficulty are strongly encouraged to make use of the EAP at any stage — as a preventive resource when pressure is building, not only as an emergency resource when it has become severe. Family members of employees may access the EAP directly without involving the company.

18.2 Manager Obligations for Team Wellbeing

Managers at this company have a specific and enforceable obligation to attend actively to the wellbeing of the people in their teams. This obligation is not discharged by asking 'how are you?' once in a performance review conversation. It requires: noticing and responding to signs that a

team member may be struggling — increased errors, changed behaviour, loss of engagement, physical signs of exhaustion — without waiting for the team member to raise the matter themselves; creating regular and private opportunities for team members to raise concerns, difficulties, or personal challenges in a safe and genuinely confidential context; modelling the working patterns and boundaries that the company's wellbeing policies are designed to protect — not sending messages at 11pm and expecting responses, not taking calls during annual leave, not treating late working as an indicator of commitment; distributing work equitably within the team rather than repeatedly overloading the most capable or most compliant members; and advocating for team members' workload constraints with senior management rather than simply passing additional demands down the management chain.

Where a manager becomes aware — or should reasonably have become aware — that a team member is experiencing mental health difficulties, the obligations include: making a confidential space available to discuss support options; directing the employee to the EAP without any implication that using the EAP is a sign of weakness or will affect their employment; engaging with the HRBP proactively to discuss what reasonable adjustments to working arrangements might be appropriate; ensuring that mental health absence is treated with the same matter-of-fact professionalism as physical health absence, without stigma, excessive questioning about the nature of the condition, or any implication that the absence is less legitimate than a physical illness; and never using an employee's disclosure of mental health difficulties in any employment decision, performance assessment, or other process in a way that disadvantages the employee.

Manager Behaviour	Aligned with Code?	Correct Approach
Sending team-wide emails at 10pm and expecting responses by midnight	No — undermines boundaries	Schedule emails to send during working hours; explicitly state no response expected outside hours
When a team member returns from mental health absence, asking them to explain what was wrong in front of the team	No — stigmatising and breaches confidentiality	Welcome back privately; ask what support they need; do not require disclosure in team settings
Noticing that a team member has been visibly struggling for several weeks but waiting for them to raise it	No — reactive rather than proactive	Create regular opportunities for check-ins; initiate conversation when concerns arise
Distributing the most demanding client work to the most reliable team members	Partially — productive but inequitable	Monitor workload distribution; actively balance allocation
Advocating strongly to the SVP for their team's workload constraints	Yes	Good practice; escalate appropriately

19. Responsible Leadership Ethics

19.1 What Responsible Leadership Means at This Company

Leadership at Arjun Technologies — whether of a small agile team or a large business division — carries ethical obligations that go significantly beyond the personal conduct obligations described in the preceding sections. A leader's decisions affect not only the work outcomes they are accountable for but the professional lives, career trajectories, financial security, and daily wellbeing of every person who reports to them and is influenced by their management style. This asymmetry of influence — the fact that a manager's words and actions have a disproportionate impact on those below them in the hierarchy — creates a heightened standard of ethical obligation that this Code describes explicitly and enforces accordingly.

Responsible leadership, as this Code defines it, encompasses five dimensions that distinguish a leader who is meeting the company's ethical expectations from one who is meeting only the minimum managerial performance standards. The first is honesty with the team: communicating truthfully about the situation of the business, the prospects of the project, and the individual team member's performance and career position, even when that honesty is uncomfortable. The second is advocacy for the team: representing the interests of direct reports to senior management — arguing for adequate resources, reasonable timelines, fair recognition, and protection from unreasonable demands — rather than simply passing pressure downward without advocacy. The third is accountability for decisions: owning the outcomes of management decisions fully, including decisions that turn out to have been wrong, rather than deflecting responsibility to the team, the process, or external factors. The fourth is development of people: actively investing in the professional growth of direct reports through coaching, feedback, stretch opportunities, and genuine development conversations. The fifth is modelling the values: consistently demonstrating in one's own conduct the ethical standards the Code requires, understanding that team members take their cues about what is really expected from what they observe their leader doing, not from what the leader tells them to do.

The conduct of leaders is assessed not only against the standards described in this Code — which apply equally to leaders and individual contributors — but also against the leadership-specific obligations that this section establishes. A leader who delivers strong commercial results through methods that violate the ethical standards in this section — who achieves targets through bullying, who protects team performance metrics by suppressing honest problem-reporting, or who builds personal influence at the cost of team wellbeing — is not, in this company's assessment, a successful leader. They are a leader who is succeeding commercially in the short term while creating ethical, cultural, and reputational risks that the company will ultimately bear.

19.2 Ethical Obligations in Performance Management

The performance management process — through which individual contribution is assessed, feedback is provided, compensation decisions are made, and career progression is supported or blocked — is one of the most ethically consequential responsibilities that any manager at this company holds. The decisions made in performance management directly affect individuals' careers, income, and self-perception in ways that can be lasting. The ethical obligations governing how those decisions are made are therefore among the most important in this Code.

Performance assessments must be based on specific, observable evidence of the individual's contribution against their documented objectives and the behavioural standards for their role — not on the manager's general impression of the person's personality, attitude, or likability. A manager who provides a Rating 2 assessment to an employee they personally find difficult without being able to cite specific, documented instances of the performance falling below the required standard is not managing performance — they are exercising personal bias through the performance management system. A manager who provides a Rating 4 assessment to a personal favourite without the evidence to support it is distorting the merit distribution and discriminating against colleagues who receive accurate ratings.

The obligation to communicate honestly in performance management applies with particular force to situations where an employee's performance is below standard. An employee whose performance is not meeting the required standard has a right to know this clearly, specifically, and in time to do something about it — not to receive vaguely positive feedback throughout the year and a Rating 2 surprise at the annual appraisal. A manager who avoids honest performance feedback because the conversation is uncomfortable is failing the employee they are managing and creating a situation — formal consequences for performance that was never clearly addressed — that is both unfair to the individual and significantly harder to manage than the original conversation would have been.

Performance Management Situation	Ethical Requirement	What Is Prohibited
Assessing the performance of a team member at the end of the assessment period	Apply the same documented performance standards and the same calibration principles to all team members	Allowing personal liking, bias, or the desire to avoid difficult conversations to influence the assessment rating
Delivering a below-expected rating to a team member	Communicate the rating clearly and directly, with specific evidence, in the assessment conversation	Softening the language or avoiding the rating in a way that leaves the employee unaware of the seriousness of their performance gap
Managing the performance of someone you have a personal relationship with	Assess performance against the same objective standards applied to all team members, and disclose the relationship to your HRBP	Giving that person higher ratings, more opportunities, or more lenient feedback than their performance objectively warrants
Identifying that a team member is performing consistently below standard	Raise performance concerns promptly and begin a formal PIP process — fully documented — no later than the end of the first month	Delaying the conversation, hoping the problem will resolve itself, or waiting until the annual review to address a pattern that has been present for months

20. The Ethics Programme — Structure, Oversight, and Culture

20.1 How the Ethics Programme Is Structured

The ethics programme at Arjun Technologies is the coordinated set of policies, training, reporting mechanisms, governance oversight, and cultural initiatives through which the company builds and maintains the ethical standards described in this Code. The programme is owned by the VP Human Resources with co-ownership from the General Counsel, and operates under the strategic oversight of the CEO and the Board Audit Committee. It is not a standalone compliance function — it is integrated into every dimension of how the organisation recruits, develops, manages, and leads its people.

The structural components of the ethics programme are as follows. Policy governance: this Code and all subsidiary ethics-related policies are reviewed annually, updated when circumstances require, and communicated to all affected employees before changes take effect. A complete policy register, showing the current version and review date of every ethics-related policy, is maintained on the HRMS portal and reviewed by the Audit Committee annually. Training: mandatory ethics training is delivered annually to all employees through the HRMS learning management system, covering updates to the Code, real scenarios from the preceding year, and focused training on the ethical areas most relevant to each employee population. Completion is tracked and non-completion is escalated. Reporting: the seven reporting channels described in Section 13.2 are actively maintained, tested, and communicated to employees, and their use is encouraged through a speak-up culture programme that includes annual CEO messaging, manager training, and the Ethics Champion network.

Governance: the Audit Committee of the Board receives a quarterly report from the General Counsel and the VP HR covering the number and nature of Code violation reports received through all channels, the outcomes of completed investigations, any material compliance issues identified through audit or monitoring, the status of remediation actions from prior periods, and any material changes in the ethical risk landscape that the committee should be aware of. This reporting ensures that the Board has direct visibility of the company's ethics programme effectiveness — not merely through management assurance, but through an independent view of the data. The Audit Committee has the authority to commission additional investigations, to request changes to the programme, and to escalate matters of concern to the full Board.

20.2 Ethics Champions Programme

The Ethics Champions programme is a network of volunteers across all business units and office locations who serve as local resources, advocates, and first points of contact for colleagues with ethics questions or concerns. Ethics Champions are not ethics enforcement officers — they have no formal authority to investigate or sanction. They are colleagues who have demonstrated a genuine commitment to the values in this Code and who are willing to

invest time in supporting others to navigate ethical questions that arise in their professional lives.

Champions are trained annually by the General Counsel and the VP HR in the provisions of this Code and the supporting policies, in active listening and confidential conversation skills, and in the appropriate escalation pathways for different categories of concern. They receive quarterly briefings on any significant changes to the ethics landscape — new regulatory developments, emerging ethical questions in AI and data, trends in the types of concerns being raised through the reporting channels — to ensure they remain well-informed resources for their colleagues. Champion conversations are confidential: a colleague who approaches an Ethics Champion for guidance or to think through a concern is not initiating a formal reporting process and the Champion will not report the conversation to HR or management without the colleague's explicit consent, unless the concern involves an immediate risk of harm.

The company aims to maintain a ratio of at least one Ethics Champion per 50 employees across all business units and office locations, with specific representation from different functional areas — engineering, sales, finance, HR, and operations — so that Champions understand the specific ethical challenges and grey areas most common in each professional context. Champion participation is recognised in the annual performance assessment as an expression of the Inclusion and Accountability values. The full list of Ethics Champions and their contact details is published on the company intranet and updated whenever the network changes.

20.3 Annual Ethics Assessment and Culture Survey

Every year, the Ethics Programme conducts an anonymous, confidential Ethics Culture Survey to assess the quality of the ethical environment at {C['short']} — not just the existence and awareness of policies, but the actual lived experience of working here. The survey covers: employees' understanding of the key provisions of the Code; their confidence that they would know what to do if they encountered a potential violation; their perception of whether their manager models the values consistently; their assessment of whether the company follows through consistently when violations are reported; their level of comfort in raising a concern through official channels without fear of retaliation; and their overall assessment of the company's ethical culture compared to other places they have worked.

Survey results are reported to the Board Audit Committee with year-on-year trend analysis. Business unit results are reported to the relevant SVP in an aggregated form that allows comparison across units without identifying individuals. Where survey results reveal specific gaps — particular business units where speak-up confidence is low, specific provisions of the Code that employees frequently report uncertainty about, or patterns suggesting inconsistency in how the code is enforced across different teams — the Ethics Programme responds with targeted training, focused manager coaching, and enhanced monitoring. The survey results are themselves a key measure of programme effectiveness and are tracked as a governance KPI by

the Audit Committee.

The company publishes an annual Ethics Programme Summary — a public-facing document that describes the programme's structure, reports on training completion and awareness metrics, summarises the types of concerns raised during the year without revealing confidential details of individual cases, and describes the programme's priorities for the year ahead. This public reporting reflects the company's commitment to transparency about its ethics programme and creates an external accountability mechanism that complements the internal governance oversight provided by the Audit Committee.

Appendix F: Annual Ethics Self-Assessment Tool

This self-assessment is to be completed annually by every employee as part of the ethics training cycle. It is not scored or assessed by HR — it is a personal reflective exercise designed to help you identify any areas where your understanding or application of the Code may need attention. Be honest with yourself: the value of the exercise is in the honest reflection, not in producing the right answers.

Question	Your Response (Yes / No / Unsure)	If No or Unsure — Action
I have read all four segments of the Code of Conduct in the past 12 months.		If no: Read the full Code before the end of this month. Contac
I can explain the four-question ethical decision framework in my own words.		If unsure: Re-read Section 3.2 and Appendix A. Discuss with
I know how to report a concern anonymously if I need to.		If no: Review Section 13.2 and save the Whistleblower hotline

Appendix G: Manager Ethics Checklist — Quarterly Review

Complete this checklist at the beginning of each quarter. It is a personal management tool — not assessed by HR. Its purpose is to prompt regular reflection on the ethical quality of your management practice. Where you identify a gap, use the suggested action to address it before the next quarterly review.

Management Area	Checklist Item	Status	Action if Not Met
Team Conduct	Every member of my team has acknowledged the current Code of Conduct.	☐ Met ☐ Not Met	Remind team members who have not acknowledg
Team Conduct	I have not observed any conduct in my team that appears to violate the Code and that I have not addressed or escala	☐ Met ☐ Not Met	Address the conduct directly or escalate a
Conflicts of Interest	I have reviewed my team's current projects and identified no undisclosed conflicts of interest.	☐ Met ☐ Not Met	Prompt any team member with a potential conflict
Performance Management	All performance feedback I have provided this quarter has been fair, specific, and documented.	☐ Met ☐ Not Met	Review any feedback that may have been influ
Wellbeing	I have had a genuine one-to-one check-in with every member of my team this quarter that went beyond work tasks.	☐ Met ☐ Not Met	Schedule check-ins for any team members with
Communication	I have not sent work-related messages to my team outside core working hours in a way that created an expectation of	☐ Met ☐ Not Met	Review communication habits and set clear
Training	Every member of my team has completed all mandatory training assigned to them this quarter.	☐ Met ☐ Not Met	Follow up with team members who have outstandi
Speak-Up Culture	I have actively created at least one opportunity this quarter for team members to raise concerns or provide feedback	☐ Met ☐ Not Met	Create a structured forum or one-to-one
Vendor and Client Ethics	I am aware of no procurement or client billing situation in my area that does not comply with the standards in Section	☐ Met ☐ Not Met	Review any arrangements with the Finance

Appendix H: Annual Ethics Certification Form

This certification is required annually from all employees at Band 5 and above, and from all members of the IT Security, Finance, Legal, and HR teams regardless of band, in addition to the standard Code acknowledgement. It certifies personal compliance with the Code over the preceding 12 months and discloses any violations or concerns that have not previously been reported.
